

SOLUTIONS MANUAL

SECTION 2.1 EXERCISES

Understanding the Concepts

Exercises 1-4 are the Check Your Understanding exercises located within the section. Their answers are found on page 48.

5. frequency
6. relative frequency
7. Pareto chart
8. pie chart
9. False. In a frequency distribution, the sum of all frequencies equals the total number of observations.
10. True.
11. True
12. False. In bar graphs and Pareto charts, the heights of the bars represent the frequencies or relative frequencies.

Practicing the Skills

(C)

(D)

(E) .477

Extending the Concepts

31 (A)

(C)

(D)

(E) Because of the important concept in

mathematics that the whole is equal to the sum of its constituting parts. That is, the two cities of New York and Los Angeles make up the total of the two combined.

(F) Because each relative frequency is obtained by dividing its frequency by the sum of all the frequencies in its column. Therefore, this is not an application of “the whole is equal to the sum of its constituting parts.”

- 13. skewed to the left
- 14. skewed to the right
- 15. approximately symmetric
- 16. approximately symmetric
- 17. bimodal
- 18. unimodal

Working with the Concepts

- 19 (A) 11
- (B) 1
- (C) 70-71
- (D) 9%
- (E) approximately symmetric

SECTION 2.2 EXERCISES

Understanding the Concepts

Exercises 1-4 are the Check Your Understanding exercises located within the section. Their answers are found on page 63.

- 5. symmetric
- 6. left, right
- 7. bimodal
- 8. frequency
- 9. False. In a frequency distribution, the class width is the difference between consecutive lower class limits.
- 10. False. The number of classes used has a big effect on the shape of the histogram.

11. True

12. True

- 20 (A) 3
- (B) 19
- (C) 3
- (D) skewed to the right
- 21 (A) 9
- (B) .020
- (C) The lower class limits are 0.180, 0.200, 0.220, 0.240, 0.260, 0.280, 0.300, 0.320, and 0.340. The upper class limits are 0.199, 0.219, 0.239, 0.259, 0.279, 0.299, 0.319, 0.339, and 0.359.

Practicing the Skills

100 – 109.9	0.083
110 – 119.9	0.017

(D)

Chapter 2: Graphical Summaries of Data

Number of Words	Relative Frequency
0-1999	0.446
2000-3999	0.446
4000-5999	0.089
6000-7999	0.000
8000-9999	0.018

(G) Both are reasonably good choices for class widths. The number of classes are both at least 5, but less than 20. Also, neither class widths are too narrow or too wide.

27 (A) Answers will vary. Here is one possibility:

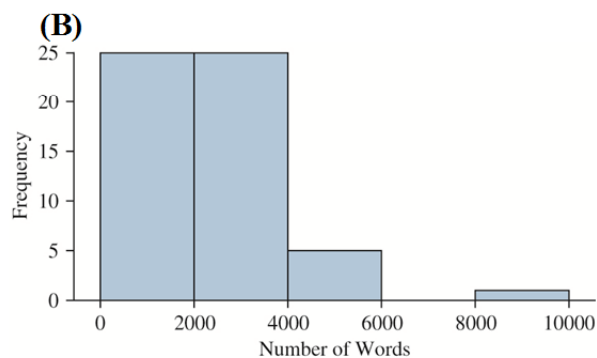

Number of Words	Frequency
0-1999	25
2000-3999	25
4000-5999	5
6000-7999	0
8000-9999	1

(E) skewed to the right

(F) Answers will vary. Here is one possibility:

Number of Words	Frequency
0 - 999	5
1000 - 1999	20
2000 - 2999	18
3000 - 3999	7
4000 - 4999	4
5000 - 5999	1
6000 - 6999	0
7000 - 7999	0
8000 - 8999	1

(C) Answers will vary. Here is one possibility:

Answers will vary. Here is one possibility:

Number of Words	Relative Frequency
0 – 999	0.089
1000 – 1999	0.357
2000 – 2999	0.321
3000 – 3999	0.125
4000 – 4999	0.071
5000 – 5999	0.018
6000 – 6999	0.000
7000 – 7999	0.000
8000 – 8999	0.018

(H) The one with 9 classes is a much superior choice over the one with only 5 classes. This is because the one with only 5 classes is much too wide. Only the most basic features of the data are visible.

Salary	Frequency
20,000 – 39,999	5
40,000 – 59,999	7
60,000 – 79,999	3
80,000 – 99,999	4
100,000 – 119,999	2
120,000 – 139,999	4
140,000 – 159,999	1
160,000 – 179,999	1
180,000 – 199,999	1

(C)

Salary	Relative Frequency
20,000 – 39,999	0.179
40,000 – 59,999	0.250
60,000 – 79,999	0.107
80,000 – 99,999	0.143
100,000 – 119,999	0.071
120,000 – 139,999	0.143
140,000 – 159,999	0.036
160,000 – 179,999	0.036
180,000 – 199,999	0.036

28 (A)

(E) skewed to the right

are in the graphs containing only four classes.

(F) Answers will vary. Here is one possibility:

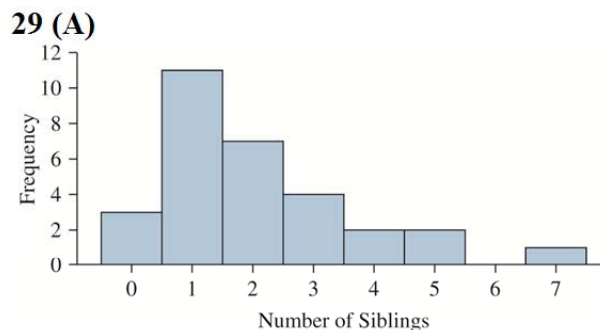

Salary	Frequency
0 – 49,999	8
50,000 – 99,999	11
100,000 – 149,999	6
150,000 – 199,999	3

Salary	Frequency
0 – 49,999	0.286
50,000 – 99,999	0.393
100,000 – 149,999	0.214
150,000 – 199,999	0.107

(H) The graphs with nine classes are much better than those with only 4 classes. This is because only the most basic features of the data are visible, when the class widths are too wide, as they

(C) skewed to the right

(B)

(C) skewed to the right

the data has one mode and is skewed to the right.

(C)

Class	Relative Frequency	Density
0.00–0.99	0.138	0.138
1.00–1.49	0.292	0.584
1.50–1.99	0.108	0.216
2.00–2.99	0.169	0.169
3.00–3.99	0.200	0.200
4.00–6.99	0.092	0.031

31. Because the 30 or more represents an open ended class.

32. Yes. The last class would become 30–34.9.

Extending the Concepts

33. We need to solve the following equation:
 $.2 + .3 + .15 + x + .1 + .1 = 1$ Answer:
 $x = .15$

34 (A) The respective class widths are 1, .5, .5, 1, 1, and 3.

This histogram gives a distorted picture of the data because it makes it look like this is a bimodal distribution, when in reality, Figure 2.6 shows that

(E) The density histogram in part (D) also has only one mode and is skewed to the right, just like the histogram in Figure 2.6. The differing class widths in a density histogram do not distort the data because dividing the relative frequency by the class width puts the proportionality back into the respective classes.

SECTION 2.3 EXERCISES

Understanding the Concepts

Exercises 1 and 2 are the Check Your Understanding exercises located within the section. Their answers are found on page 74.

3. leaf
 4. stems
 5. time-series plot
 6. time
 7. true
 8. False. In a stem-and-leaf plot, each leaf must be a single digit.
 9. true
 10. False. In a time-series plot, the horizontal axis represents time.

15.2 15.2 15.4 15.5 15.7 15.7 15.8
 16.0 16.1 16.1 16.1 16.2 16.3 16.7
 16.7 16.9 18.2 18.3 18.8

10 | 0
10 | 6
11 |
11 | 5
12 | 4
12 |
    
```

(C) The one in part (A) does, because the one in part (B) has too many stems with no leaves. The stem-and-leaf plot in part (A) shows that the bulk of the prices are in the 30's, 40's, and 50's, and that the data is skewed to the right.

18 (A)

```

3 | 89
4 | 1222334556677788999
5 | 0000112244466788888999
6 | 00033337889
7 | 01123
    
```

(B)

```

3 |
3 | 89
4 | 1222334
4 | 556677788999
5 | 00001122444
5 | 66788888999
6 | 0003333
6 | 7889
7 | 01123
7 |
    
```

(C) The one in part (B) does, because most of the leaves are on three stems (temperatures in the 40's, 50's, and 60's). For this reason, the stem-and-leaf plot in part (A) does not reveal much detail about the data.

19 (A)

```

0 | 3
0 | 55669999
1 | 01111112222333344
1 | 555666889
2 | 11124
2 | 556777
3 | 0111334
3 | 555678
4 | 02
4 | 6
5 |
5 | 9
6 |
6 | 66
    
```

(B) Both plots show that more leaves are on stem 1, by far, over all other stems. However, the advantage to the split stem-and-leaf plot in part (A) is that it much better shows how the emissions data is skewed to the right.

	4	123
	4	6

(B) Leaf 1 represents the ages of the Wimbledon winners and Leaf 2 represents the ages of the winners of the Master's. From this back-to-back split stem-and-leaf plot, we clearly see that the Wimbledon champions are younger.

22 (A) In the following back-to-back split stem-and-leaf plot, Leaf 1 displays the lengths of time of the PG movies and Leaf 2 does so for the R rated movies. The data is rounded to the nearest one-tenth of an hour, so a 90 minute movie is 1.5 hours long. The stem represents the whole hour and the leaves

23. Yes, there are some gaps in the dotplot below for the Macon, GA temperature data.

24. This dotplot shows that the data is skewed to the right.

25 (A)

(B) Increasing: 89-92, 00-03, and 07-09
 Decreasing: 86-89, 92-00, and 03-07
 (06 = 07)

Chapter 2: Graphical Summaries of Data

26 (A)

(B) Increasing over that period.

27 (A)

- (B) It increased in the 50's, 60's, 80's, and 00's. It decreased in the 70's and 90's.
- (C) It caused a big increase.
- (D) It increased from 1965 to 1969, and then decreased from 1969 to 1975.

28 (A)

(B) Female enrollment is growing faster.

29 (A) \$600 billion

(B) \$300 billion

(C) true

(D) true

30 (A) 1980

(B) 85

(C) Staying about the same.

31 (A) 115 inches

(B) 1910

(C) less than

(D) true

(E) false

32 (A) 1992

(B) The two events decreased their average salaries.

Extending the Concepts

33 (A)

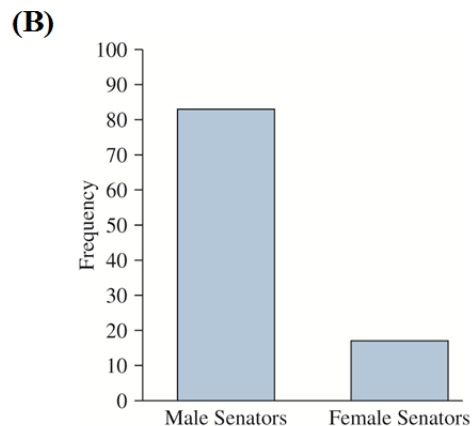

(C) They both have the same shape (skewed to the right), because the class width in the histogram is 5, as is each line for each stem 5. The number of leaves in each stem is the frequency of occurrence, which is also the height of the bars in the histogram.

SECTION 2.4 EXERCISES

Understanding the Concepts

Exercises 1 and 2 are the Check Your Understanding exercises located within the section. Their answers are found on page 80.

3. 0
4. proportional
5. Option (i) is correct, because the baseline is at 0. Option (ii) exaggerates the rate of the decline.
6. The bar graph does, because its baseline is correctly placed at 0. The time-series plot exaggerates the rate of the increase.
7. The bar graph is more accurate. The pictures of the dollars make the difference appear much larger than the correctly drawn bar graph does. The reason is that both the height and length of the dollar has been increased.
8. B does. The areas of the images are proportional to the increase.
9. The bar graph is an accurate depiction.
10. It is misleading because the baseline is not placed at zero.
- 11 (A) It is misleading because you can see the tops of the bars in the three-dimensional graph. This often causes them to look shorter than they really are.

12. Option (ii) is the correct one, because it correspondingly matches up with graph (A) which is the correct one. Graph (B) does not have a baseline value of zero, so it gives the incorrect description of option (I).

Grade	Relative Frequency
A	0.333
B	0.185
C	0.222
D	0.111
F	0.148

Extending the Concepts

13 (A)

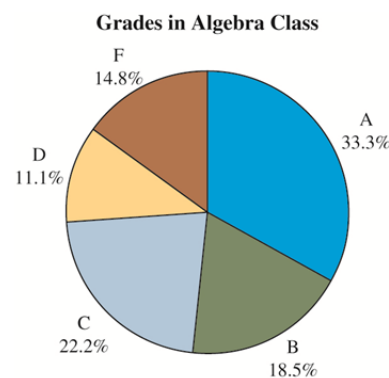

(B) Yes

(C) Figure 2.23 does. It has a baseline of zero (unlike Figure 2.24), with a more accurate depiction of the range of data values than the graph in part (A) above.

3.

(C) The one with split stems in part (B).

12.

13 (A)

(B) They are inversely related. That is, as digital sales increase, physical sales decrease.

14 (A)

(B)

(C) The total units sold has been increasing, but the total retail value has been decreasing, because the total sold

is going up due to increased units sold of the much cheaper format (digital).

15. Option (ii) is the correct statement, because the first graph is misleading, due to the fact that its baseline does not start at zero.

Write About It

1. A frequency bar graph and the relative frequency bar graph for the same data are identical except for the scale on the vertical axis. This is because the relative frequency bar graph just converts the actual frequency numbers over to their corresponding proportional equivalents.
2. The main difference between the two, is that unlike frequency distributions for qualitative data, there are no natural categories for frequency distributions for quantitative data. In the latter, the data must be divided into classes, which could vary depending on the individual creating them.
3. Answers will vary.
4. Answers will vary.
5. Answers will vary.

Case Study: Do Late-Model Cars Get Better Gas Mileage?

1.

Mileage	Frequency
16.0–16.9	1
17.0–17.9	0
18.0–18.9	0
19.0–19.9	0
20.0–20.9	0
21.0–21.9	3
22.0–22.9	0
23.0–23.9	3
24.0–24.9	3
25.0–25.9	0
26.0–26.9	3
27.0–27.9	9
28.0–28.9	8
29.0–29.9	3
30.0–30.9	6
31.0–31.9	6
32.0–32.9	3
33.0–33.9	4
34.0–34.9	3
35.0–35.9	1
36.0–36.9	1
37.0–37.9	1
38.0–38.9	3
39.0–39.9	0
40.0–40.9	1

2. A class width of one is too narrow for this

data because there are lots of classes with 0 or 1 cars in them.

3.

Mileage	Frequency	Relative Frequency
15.0–16.9	1	0.016
17.0–18.9	0	0.000
19.0–20.9	0	0.000
21.0–22.9	3	0.048
23.0–24.9	6	0.097
25.0–26.9	3	0.048
27.0–28.9	17	0.274
29.0–30.9	9	0.145
31.0–32.9	9	0.145
33.0–34.9	7	0.113
35.0–36.9	2	0.032
37.0–38.9	4	0.065
39.0–40.9	1	0.016

4. We can see from the relative frequency histogram below, that it is unimodal, with very little skew.

5.

Mileage	Relative Frequency
14.0–15.9	2
16.0–17.9	3
18.0–19.9	5
20.0–21.9	2
22.0–23.9	1
24.0–25.9	10
26.0–27.9	9
28.0–29.9	9
30.0–31.9	7
32.0–33.9	2
34.0–35.9	5

6.

Mileage	Relative Frequency
14.0–15.9	0.036
16.0–17.9	0.055
18.0–19.9	0.091
20.0–21.9	0.036
22.0–23.9	0.018
24.0–25.9	0.182
26.0–27.9	0.164
28.0–29.9	0.164
30.0–31.9	0.127
32.0–33.9	0.036
34.0–35.9	0.091

7. We can see from the relative frequency histogram below, that it is unimodal, with slight skew to the left.

8. 2000 cars tend to have the higher MPG's.

9. The back-to-back stem-and-leaf plot (displayed immediately below) illustrates the comparison better than the histograms (displayed above) do. This is because all of the data in the comparison is right there in one plot, as opposed to having to look between two different histograms.
