SOLUTIONS MANUAL

Building Blocks of Managerial Accounting

Quick Check	Questions
--------------------	-----------

Answers:

1. b	3. a	5. C	7. b	9. b
2. b	4. b	6. b	8. d	10. c

(5 min.) **S2-1**

X-Treme is a *merchandiser* because it has a single inventory account.

Y-Not? is a *service* company because it has no inventory.

Zesto is a *manufacturer* because it has three kinds of inventory: raw materials inventory, work in process inventory, and finished goods inventory.

- a. <u>Service</u> companies generally have no inventory.
- b. Bombardier is a *manufacturing* company.
- c. Merchandisers' inventory consists of <u>the cost of</u> <u>merchandise</u> and <u>freight in.</u>
- Manufacturing companies carry three types of inventories: raw materials inventory, work in process inventory, and <u>finished goods inventory.</u>
- e. TD Insurance is a *service* company.
- f. Two types of <u>merchandising</u> companies include <u>retailers</u> and <u>wholesalers.</u>
- g. Direct materials are stored in *raw materials inventory*.
- h. Zellers is a *merchandising* company.
- i. Manufacturers sell from their stock of <u>finished goods</u> <u>inventory.</u>
- J. Labour costs usually account for the highest percentage of <u>service</u> companies' costs.
- k. Partially completed units are kept in the <u>work in process</u> <u>inventory</u>.

- a. Distribution
- b. Design
- c. Marketing
- d. Research and Development (R&D)
- e. Customer Service
- f. Production or Purchases

- a. Production
- **b. Customer Service**
- c. Distribution
- d. Research and Development (R&D)
- e. Marketing
- f. Research and Development (R&D)
- g. Production
- h. Design
- i. Distribution
- j. Production

(10 min.) **S2-5**

- a. direct; trace
- b. indirect; allocate
- c. direct; trace
- d. indirect; allocate
- e. direct; trace
- f. indirect; allocate
- g. direct; trace
- h. direct; trace

- a. Inventoriable product cost
- b. Inventoriable product cost
- c. Period cost
- d. Period cost
- e. Inventoriable product cost*
- f. Inventoriable product cost
- g. Period cost
- h. Inventoriable product cost
- i. Period cost

*Since the software is for tracking inventory, the cost would be associated with production. It would therefore likely be classified as part of manufacturing overhead, an inventoriable product cost. However, some companies might consider the software an administrative cost, which would be a period cost.

(5–10 min.) **S2-7**

Snap's				
Total Manufacturing Overhead Computation				
Manufacturing overhead:				
Glue for camera frames*	\$ 250			
Plant depreciation expense	10,000			
Plant supervisor's salary	4,000			
Plant janitor's salary	1,000			
Oil for manufacturing equipment	25			
Total manufacturing overhead	<u>\$15,275</u>			

*Assuming that it is not cost-effective to trace the low-cost glue to individual cameras.

The following explanation is provided for instructional purposes, but it is not required.

Depreciation on company cars used by the sales force is a marketing expense, interest expense is a financing expense, and the company president's salary is an administrative expense. None of these expenses is incurred in the manufacturing plant, so they are not part of manufacturing overhead.

The flash bulbs are a direct material, not part of manufacturing overhead.

Purchases	\$40,000				
Import duties	1,000				
Freight-in	3,000	44,000			
Cost of goods available for sale		47,500			
Ending inventory		(5,500)			
Cost of goods sold		<u>\$42,000</u>			

(5–10 min.) **S2-11**

Salon Secrets					
Income Statement					
Sales revenue		\$38,230,000			
Cost of goods sold:					
Beginning inventory	\$ 3,270,000				
Purchases	23,450,000				
Cost of goods available					
for sale	26,720,000				
Ending inventory	(3,920,000)				
Cost of goods sold		(22,800,000)			
Gross profit		15,430,000			
Operating expenses		(6,115,000)			
Operating income		<u>\$ 9,315,000</u>			

Sunny's Bikes						
Computation of Direct Mate	Computation of Direct Materials Used					
Direct materials used:						
Beginning raw materials inventory		\$ 4,000				
Purchases of direct materials	\$16,000					
Import duties	1,000					
Freight-in	200	17,200				
Direct materials available for use		21,200				
Ending raw materials inventory (1,50						
Direct materials used		<u>\$19,700</u>				

Smith Manufacturing					
Schedule of Cost of Goods Manufactured					
Beginning work in process inventory		\$ 76,000			
Add: Direct materials used	\$524,000				
Direct labour	223,000				
Manufacturing overhead	742,000				
Total manufacturing costs incurred					
during the period		<u>1,489,000</u>			
Total manufacturing costs to account for 1,565,					
Less: Ending work in process inventory (85,000					
Cost of goods manufactured		<u>\$1,480,000</u>			

Relevant quantitative information might include:

- Difference in salaries
- Difference in benefits
- Difference in costs of housing
- Difference in costs of transportation
- Difference in costs of food

Relevant qualitative information might include:

- Difference in lifestyle
- Difference in weather
- Difference in job description
- Difference in future career development opportunities
- Proximity to family and friends

Relevant information always pertains to the future and differs between alternatives.

Student responses may vary.

- a) fixed
- b) fixed
- c) variable
- d) variable in most cases. In some cases, consumers are charged a flat monthly fee for water hook-up (fixed portion of the bill), plus a fee for the amount of water used (variable portion of the bill). In such cases, the monthly water bill would be a mixed cost.
- e) fixed or variable, depending on the cell phone plan. Plans that offer a set monthly fee for virtually unlimited minutes are fixed because the cost stays constant over a wide range of minutes. Plans that charge a specified rate per minute are variable.
- f) fixed
- g) usually variable; fixed in some cities offering unlimited use with monthly passes.

(10 min.) **E2-16A**

- a. <u>Manufacturing companies</u> produce their own inventory.
- b. <u>Merchandising companies</u> typically have a single category of inventory.
- c. <u>Service companies</u> do not have tangible products intended for sale.
- d. <u>Merchandising companies</u> resell products they previously purchased ready-made from suppliers.
- e. <u>Manufacturing companies</u> use their workforce and equipment to transform raw materials into new finished products.
- f. <u>Merchandising companies</u> sell to consumers.
- g. Swaim, a company based in Saskatchewan, makes furniture. Partially completed sofas are <u>work in process</u> <u>inventory</u>. Completed sofas that remain unsold in the warehouse are <u>finished goods inventory</u>. Fabric and wood are <u>raw materials inventory</u>.
- h. For McCain's, potatoes, cardboard boxes, and waxedpaper liners are classified as *raw materials inventory*.
- i. <u>Wholesalers</u> buy in bulk from manufacturers and sell to retailers.

Reqs. 1 and 2

		Rogers	Plus					
Cost Classification

	<u>\$ 75</u>

(5–10 min.) E2-19A

Cost	Direct or
COSt	Indirect cost?
a. Produce manager's salary	Direct
b. Cost of the produce	Direct
c. Store utilities	Indirect
d. Bags and twist ties provided to customers in	
the produce department for packaging fruits	
and vegetables.	Direct
e. Depreciation expense on refrigerated	
produce display shelves	Direct
f. Cost of shopping carts and baskets	Indirect
g. Wages of checkout clerks	Indirect
h. Cost of grocery store's advertisement flyer	
placed in the weekly newspaper	Indirect
i. Store manager's salary	Indirect
j. Cost of equipment used to peel and core	
pineapples at the store	Direct
k. Free grocery delivery service provided to	
senior citizens	Indirect
I. Depreciation on self-check-out machines	Indirect

a. *Direct costs* can be traced to cost objects.

b. *Period costs* are expensed when incurred.

c. *Prime costs* are the combination of direct materials and direct labour.

d. Compensation includes wages, salaries and *fringe benefits*.

e. *Inventoriable product costs* are treated as *assets* until sold.

f. *Inventoriable product costs* include costs from only the production or purchases element of the value chain.

g. *Indirect costs* are allocated to cost objects.

h. Both direct and indirect costs are *assigned* to *cost objects*.

i. <u>*Total costs*</u> include costs from every element of the value chain.

j. <u>Conversion costs</u> are the combination of direct labour and manufacturing overhead.

k. *Inventoriable product costs* are expensed as <u>cost of goods</u> <u>sold</u> when sold.

I. Manufacturing overhead includes all *indirect costs* of production.

inventory			<u>(35,000)</u>
Cost of goods manufactured			<u>\$213,000</u>

Strike Marine Company	
Schedule of Cost of Goods Se	old
Beginning finished goods inventory	\$ 18,000
Cost of goods manufactured*	<u>213,000</u>
Cost of goods available for sale	231,000
Ending finished goods inventory	(25,000)
Cost of goods sold	<u>\$206,000</u>

*From schedule of cost of goods manufactured.

Strike Marine Company			
Income Statemen	Income Statement		
For Last Year			
Sales revenue (32,000 × \$12)		\$384,000	
Cost of goods sold:			
Beginning finished goods inventory	\$ 18,000		
Cost of goods manufactured			
(E 2-25A)	<u>213,000</u>		
Cost of goods available for sale	231,000		
Ending finished goods inventory	(25,000)		
Cost of goods sold		206,000	
Gross profit		178,000	
Operating expenses:			
Marketing expenses	\$ 77,000		
General and administrative expenses	29,000	<u>106,000</u>	
Operating income		<u>\$ 72,000</u>	

Students may simply use the \$206,000 cost of goods sold computation from E2-25A rather than repeating the details of the computation here. *Instructional note:* This is a fairly challenging exercise that requires students to work backwards through financial statement elements.

а.

Revenues	\$27,000
Cost of goods sold	15,000
Gross profit	<u>\$12,000</u>

b. To determine beginning raw materials inventory, start with the materials used computation and work backwards:

Beginning raw materials inventory	\$ 2,000
Purchases of direct materials	9,000
Available for use	11,000
Ending raw materials inventory	(3,000)
Direct materials used	<u>\$ 8,000</u>

c. To determine ending finished goods inventory, start by computing the cost of goods manufactured:

Beginning work in process inventory		\$ 0
Direct materials used	\$8,000	
Direct labour	3,000	
Manufacturing overhead	6,300	17,300
Total manufacturing costs to account for		17,300
Ending work in process inventory		(1,500)
Cost of goods manufactured		<u>\$15,800</u>

Now use the cost of goods sold computation to determine ending finished goods inventory:

Beginning finished goods inventory	\$ 4,300
Cost of goods manufactured (from above)	<u>15,800</u>
Cost of goods available for sale	20,100
Ending finished goods inventory	(5,100)
Cost of goods sold (from part A)	<u>\$15,000</u>

	1	
a. Cost of operating automated	Relevant–The cost of	
production machinery versus the cost	employing labour versus	
of direct labour when deciding whether	automating production will	
to automate production.	likely differ.	
b. Cost of computers purchased six	Irrelevant–The cost of the	
months ago when deciding whether to	computers, which were	
upgrade to computers with faster	purchased in the past, is a	
processing speed.	sunk cost.	
c. Cost of purchasing packaging	Relevant–The cost is relevant	
materials from an outside vendor when	if it differs between	
deciding whether to continue	outsourcing and making the	
manufacturing the packaging materials	materials in-house.	
in-house.		
d. The property tax rates in different	Relevant–The company will	
locales when deciding where to locate	incur different property taxes	
the company's headquarters.	depending on where they	
	locate.	
e. The type of gas (regular or premium)	Relevant–The type of gas	
used by delivery vans when deciding	used by the delivery vans will	
which make and model of van to	affect the cost of operating the	
purchase for the company's delivery	vans in the future.	
van fleet.		
f. Depreciation expense on old	Irrelevant-Depreciation	
manufacturing equipment when	expense is simply the paper	
deciding whether to replace it with	write-off (expensing) of a sunk	
newer equipment.	cost. Also, the remaining net	
	book value of the equipment	
	will need to be expensed	
	regardless of whether the	
	equipment is replaced.	

g. The fair market value of old manufacturing equipment when deciding whether to replace it with newer equipment.	Relevant–The fair market value is the amount of money the company could expect to receive from selling the old equipment if they decide to
h. The interest rate paid on invested	replace it with newer equipment. Relevant–Funds tied up in
funds when deciding how much inventory to keep on-hand.	inventory can not earn interest. The higher the interest rate, the more likely the company will want to decrease inventory levels and invest the extra funds.
i. The cost of land purchased three years ago when deciding whether to build on the land now or wait two more years before building.	Irrelevant–The cost of the land is a sunk cost whether the company builds on the land now or in the future.
j. The total amount of the restaurant's fixed costs when deciding whether to add additional items to the menu.	Most likely irrelevant–Unless the additional items will require the restaurant to purchase additional kitchen equipment, the total fixed cost will probably not change.

a. Managers cannot influence *uncontrollable costs* in the short run.

b. Total <u>variable costs</u> decrease when production volume decreases.

c. For decision-making purposes, costs that do not differ between alternatives are *irrelevant costs*.

d. Costs that have already been incurred are called <u>sunk</u> <u>costs</u>.

e. Total <u>fixed costs</u> stay constant over a wide range of production volume.

f. The *differential cost* is the difference in cost between two alternative courses of action.

g. The product's *marginal cost* is the cost of making one more unit.

h. A product's <u>fixed costs</u> and <u>variable costs</u>, not the product's <u>average cost</u>, should be used to forecast total costs at different production volumes.

(10 min.) E2-30A

COST	Variable or Fixed
a. Thread used by a garment manufacturer	Variable
b. Property tax on manufacturing facility	Fixed
c. Yearly salaries paid to sales staff	Fixed
d. Gasoline used to operate delivery vans	Variable
e. Annual contract for pest (insect) control	Fixed
f. Boxes used to package breakfast cereal at	
Kellogg's	Variable
g. Straight-line depreciation on production	
equipment	Fixed
h. Cell phone bills for sales staff–contract billed	
at \$.03 cents per minute	Variable
i. Wages paid to hourly assembly-line workers	
in the manufacturing plant	Variable
j. Monthly lease payment on administrative	
headquarters	Fixed
k. Commissions paid to the sales staff–5% of	
sales revenue	Variable
I. Credit card transaction fee paid by retailer-	
\$0.20 per transaction plus 2% of the sales	
amount	Variable
m. Annual business licence fee from city	Fixed
n. Cost of ice cream sold at Cow's Dairy in PEI	Variable
o. Cost of shampoo used at a hair salon	Variable
	4

a)	Variable costs + <u>Fixed costs</u> = Total costs	=	20,000,000 units × \$1 / unit	= = =	\$20,000,000 <u>5,000,000</u> \$25,000,000
b)	\$25,000,000	÷	20,000,000 units	=	\$1.25 per unit
c)	\$ 5,000,000	÷	20,000,000 units	=	\$0.25 per unit
d)	Variable costs + <u>Fixed costs</u> = Total costs	=	25,000,000 units × \$1 / unit	= = =	\$25,000,000 <u>5,000,000</u> \$30,000,000
e)	\$30,000,000	÷	25,000,000 units	=	\$1.20 per unit
f)	\$ 5,000,000	÷	25,000,000 units	=	\$0.20 per unit

 g) The average product cost decreases as production volume increases because the company is spreading its fixed costs over 5 million more units. The company will be operating more efficiently, so the average cost of making each unit decreases.

- a. <u>Service companies</u> do not sell tangible products.
- b. <u>Wholesalers</u> buy in bulk from manufacturers and sell to retailers.
- c. <u>Manufacturing companies</u> produce their own inventory.
- d. <u>Merchandising companies</u> typically have only one category of inventory.
- e. Keller Inc. builds bicycles. Partially completed bikes are <u>work in process inventory</u>. Completed bikes that remain unsold in the warehouse are <u>finished goods inventory</u>. Aluminum and plastic are <u>raw materials inventory</u>.
- f. <u>Merchandising companies</u> sell merchandise to consumers.
- g. <u>Manufacturing companies</u> transform raw materials into new finished products using their workforce and equipment.
- h. <u>Merchandising companies</u> resell products they previously purchased ready-made from suppliers.
- i. For Sony, blank compact discs, CD cases, and unprinted case liners are classified as *raw materials inventory*.

Total inventoriable product costs:

Direct materials	\$ 66
Direct	9
labour	
Manufacturing overhead	<u>55</u>
Total inventoriable product cost	<u>\$130</u>

Req. 4

The total prime cost is:

Direct materials	\$ 66
Direct	9
labour	
	<u>\$ 75</u>

Req. 5

The total conversion cost is:

Direct	\$ 9
labour	
Manufacturing overhead	<u>55</u>
	<u>\$ 64</u>

(5–10 min.) E2-35B

Cost	Direct or Indirect cost?
a. Garden manager's salary	Direct
b. Cost of shopping carts and baskets	Indirect
c. Wages of checkout clerks	Indirect
d. Cost of the merchandise	Direct
e. Depreciation expense on demonstration	
water feature	Direct
f. Cost of hardware store's advertisement flyer	
placed in the weekly newspaper	Indirect
g. Depreciation on self-checkout machines	Indirect
h. Bags provided to garden customer for	
packaging small items	Direct
i. Store manager's salary	Indirect
j. Free garden delivery service provided to	
senior citizens	Direct
k. Cost of equipment used to plant and water	
plants at the store	Direct
I. Store utilities	Indirect

- a. <u>Inventoriable product costs</u> include costs from only the production or purchases element of the value chain.
- b. *Indirect costs* are allocated to cost objects.
- c. The combination of direct materials and direct labour is *prime costs*.
- d. The combination of direct labour and manufacturing overhead is <u>conversion</u> <u>costs</u>.
- e. Both direct and indirect costs are *assigned* to *cost objects*.
- f. All *indirect costs* of production are included in manufacturing overhead.
- g. <u>*Period costs*</u> are expensed when incurred.
- h. Wages, salaries, and *fringe benefits* are considered compensation.
- i. <u>*Total costs*</u> include costs from every element of the value chain.
- j. *Direct costs* can be traced to cost objects.
- k Until sold, *inventoriable product costs* are treated as *assets*.
- I. <u>Inventoriable product costs</u> are expensed as <u>cost of goods sold</u> when sold.

Cost of goods manufactured* 231,2		
Cost of goods available for sale 244,20		
Ending finished goods inventory	(29,000)	
Cost of goods sold <u>\$215</u>		

*From schedule of cost of goods manufactured.

(continues E2-41B) (15–20 min.) E2-42B

South Marine Company				
Income Statement				
For Last Year				
Sales revenue (37,000 × \$14)	\$518,000			
Cost of goods sold:				
Beginning finished goods inventory	\$ 13,000			
Cost of goods manufactured				
(E2-41B)	<u>231,200</u>			
Cost of goods available for sale	244,200			
Ending finished goods inventory	(29,000)			
Cost of goods sold		<u>215,200</u>		
Gross profit		302,800		
Operating expenses:				
Marketing expenses	\$ 78,000			
General and administrative expenses	26,500	104,500		
Operating income <u>\$ 198,300</u>				

Students may simply use the \$215,200 cost of goods sold computation from E2-41B rather than repeating the details of the computation here.

(25 min.) E2-43B

Instructional note: This is a fairly challenging exercise that requires students to work backwards through financial statement elements.

a.

Revenues	\$27,200
Cost of goods sold	15,100
Gross profit	<u>\$12,100</u>

d. To determine beginning raw materials inventory, start with the materials used computation and work backwards:

Beginning raw materials inventory	\$ 3,000
Purchases of direct materials	9,100
Available for use	12,100
Ending raw materials inventory	(3,600)
Direct materials used	<u>\$ 8,500</u>

e. To determine ending finished goods inventory, start by computing the cost of goods manufactured:

Beginning work in process inventory		\$ 0
Direct materials used	\$8,500	
Direct labour	3,900	
Manufacturing overhead	6,000	18,400
Total manufacturing costs to account for		18,400
Ending work in process inventory		(1,800)
Cost of goods manufactured		<u>\$16,600</u>

Now use the cost of goods sold computation to determine ending finished goods inventory:

Beginning finished goods inventory	\$ 4,700
Cost of goods manufactured (from above)	<u>16,600</u>
Cost of goods available for sale	21,300
Ending finished goods inventory	(6,200)
Cost of goods sold (from part A)	<u>\$15,100</u>

R	
a. Cost of barcode scanners purchased	Irrelevant – the cost of the
six months ago when deciding whether	scanners, which were
to upgrade to scanners that are faster	purchased in the past, is a
and easier to use.	sunk cost.
b. The fair market value of an ice cream	Relevant – the fair market
truck when deciding whether to replace	value is the amount of money
it with a newer ice cream truck.	the company could expect to
	receive from selling the old
	truck if they decide to replace
	it with a newer truck.
c. Cost of operating automated	Relevant – the cost of
production machinery versus the cost	employing labour versus
of direct labour when deciding whether	automating production will
to automate production.	likely differ.
d. Cost of purchasing packaging	Relevant – the cost is relevant
materials from an outside vendor when	if it differs between
deciding whether to continue	outsourcing and making the
manufacturing the packaging materials	materials in-house.
in-house.	
e. The cost of an expansion site	Irrelevant – the cost of the site
purchased two years ago when	is a sunk cost whether the
deciding whether to sell the site or to	company builds on the land
expand business to it now.	now or sells it.
f. The property tax rates in different	Relevant – the company will
locales when deciding where to locate	incur different property taxes
the company's headquarters.	depending on where they
	locate.

g. The interest rate paid on invested funds when deciding how much inventory to keep on-hand.	Relevant–Funds tied up in inventory cannot earn interest. The higher the interest rate, the more likely the company will want to decrease inventory levels and invest the extra funds.
h. The gas mileage of delivery vans, when deciding which make and model of van to purchase for the company's delivery van fleet.	Relevant–The amount of gas used by the delivery vans will affect the cost of operating the vans in the future.
i. Depreciation expense on old manufacturing equipment when deciding whether to replace it with newer equipment.	Irrelevant–Depreciation expense is simply the paper write-off (expensing) of a sunk cost. Also, the remaining net book value of the equipment will need to be expensed regardless of whether the equipment is replaced.
j. The total amount of a coffee shop's fixed costs when deciding whether to introduce a new drink line.	Most likely irrelevant–Unless the additional items will require the coffee shop to purchase additional materials, the total fixed cost will probably not change.

- a. In the short run, managers cannot influence *uncontrollable costs.*
- b. Costs that do not differ between alternatives are *irrelevant costs*, for decision-making purposes.
- c. Total *variable costs* decrease when production volume decreases.
- d. A product's *fixed costs* and *variable costs*, not the product's *average cost*, should be used to forecast total costs at different production volumes.
- e. Total *fixed costs* stay constant over a wide range of production volumes.
- f. <u>Sunk costs</u> are costs that have already been incurred.
- g. The cost of making one more unit is the product's *marginal cost*.
- h. The difference in cost between two alternative courses of action is the <u>differential</u> <u>costs</u>.

(10 min.) **E2-46B**

COST	Variable or Fixed
a. Credit card transaction fee paid by retailer-	
\$0.20 per transaction plus 2% of the sales	
amount	Variable
b. Yearly salaries paid to marketing staff	Fixed
c. Gasoline used to drive company shuttle	Variable
d. Syrup used by an ice cream parlour	Variable
e. Property tax on an electronics factory	Fixed
f. Annual contract for company landscaping	Fixed
g. Boxes used to package computer	
components at Dell	Variable
h. Wages paid to hourly retail staff at the	
company store	Variable
i. Annual web hosting fee for company website	Fixed
j. Cost of coffee sold at Starbucks	Variable
k. Monthly lease payment on branch office	Fixed
I. Straight-line depreciation on production	
equipment	Fixed

m. Rental car fees for company business	
travelers–contract billed at \$0.25 per kilometre	Variable
n. Commissions paid to the sales staff–7% of	
sales revenue	Variable
o. Cost of paint used at an auto body shop	Variable

(10 min.) E2-47B

a)	Variable costs + <u>Fixed costs</u> = Total costs	=	15,000,000 units × \$1 / unit	= = =	\$15,000,000 <u>6,000,000</u> \$21,000,000
b)	\$21,000,000	÷	15,000,000 units	=	\$1.40 per unit
C)	\$ 6,000,000	÷	15,000,000 units	=	\$0.40 per unit
d)	Variable costs + <u>Fixed costs</u> = Total costs	=	20,000,000 units × \$1 / unit	= = =	\$20,000,000 <u>6,000,000</u> \$26,000,000
e)	\$26,000,000	÷	20,000,000 units	=	\$1.30 per unit
f)	\$ 6,000,000	÷	20,000,000 units	=	\$0.30 per unit

 g) The average product cost decreases as production volume increases because the company is spreading its fixed costs over 5 million more units. The company will be operating more efficiently, so the average cost of making each unit decreases.

*Salt's low value makes it likely treated as indirect materials. However, some students may classify salt as direct materials.

(continued) P2-48A

Req. 3 Total inventoriable product costs:

Direct materials	\$21,800
Direct	8,000
labour	
Manufacturing overhead	<u>4,775</u>
Total inventoriable product costs	<u>\$34,575</u>

Req. 4

The managers of R&D and design are likely to cut their costs. This can increase costs of later value-chain elements. For example, if the recipe is not adjusted to consumer tastes, more marketing may be required and/or sales may decline. If the recipe is not designed so the soda is easy to produce, or if the production process is not well laidout, production costs will be higher than they need to be. If cutting R&D and design costs leads to lower quality soda, customer service costs such as returns may also increase.

Administrative expense	<u>55,000</u>	154,000		
Operating income		\$100,000		

*From the Schedule of Cost of Goods Manufactured

a. As shown below, the quantitative data suggests you would net \$4,000 more by taking Job #1 and living at home.

Attributes:	Take Job #1 and live at home	Take Job #2 and rent an apartment
Salary	\$30,000	\$35,000
Rent	0	(6,000)
Food	0	(2,400)
Cable	0	(600)
Salary, net of living expenses	\$30,000	\$26,000
Net Difference = \$30,000 - \$	\$26,000 = \$4,000	

- b. The costs of doing laundry, operating the car, and paying for cell phone service are irrelevant because they do not differ between the two alternatives.
- c. You might consider whether you would like to live with your parents again! Even though you would benefit by \$4,000 if you live at home, you may decide it isn't worth it!

(continued) P2-51A

d. If you want Job #2 and you want to live at home, you will benefit by the higher salary and the lower living expenses. However, you'll need to factor in the higher costs of commuting to work via car (gas, tolls, service) or train (fare). Qualitatively, you will want to consider whether the time spent commuting is worth the extra money you will be netting from living at home.

Req. 1

Monthly pizza volume	2,500	3,000	5,000
Total fixed costs	\$ 6,000	\$ 6,000	\$ 6,000
Total variable costs	5,000	6,000	10,000
Total costs	<u>\$11,000</u>	<u>\$12,000</u>	<u>\$16,000</u>
Fixed cost per pizza	\$ 2.40	\$ 2.00	\$ 1.20
Variable cost per pizza	2.00	2.00	2.00
Average cost per pizza	<u>\$ 4.40</u>	<u>\$ 4.00</u>	<u>\$ 3.20</u>
Sales price per pizza	\$10.00	\$10.00	\$10.00
Average profit per			
pizza	\$ 5.60	\$ 6.00	\$ 6.80

Req. 2

Companies want to operate near or at full capacity to better utilize the resources they spend on fixed costs. The more units they produce, the lower the average fixed cost per unit.

Req. 3

At the current volume, the restaurant's monthly profit is \$18,000 calculated as follows

Total Sales Revenue	- Total Costs	= Monthly Profit
(\$10 per pizza × 3,000 pizzas)	- \$12,000	= \$18,000

If the owner decreases the sales price to increase volume, the new monthly profit will be:

Total Sales Revenue at the new price and volume	 Total Costs at the new volume 	= New Monthly Profit
(\$9.50 per pizza × 5,000 pizzas)	- \$16,000	= \$31,500

Since the restaurant will generate an additional \$13,500 of profit (\$31,500 - \$18,000),

the owner should decrease the sales price to increase the volume.

Problems (Group B)

(10 min.) P2-56B

a. As shown below, the quantitative data suggests you would net \$8,050 more by taking Job #1 and living at home.

Attributes:	Take Job #1 and live at home	Take Job #2 and rent an apartment
Salary	\$49,000	\$54,000
Rent	0	(9,000)
Food	0	(3,500)
Cable	0	(550)
Salary, net of living expenses	\$49,000	\$40,950
Net Difference = \$49,000 - \$	\$40,950 = \$8,050	

- b. The costs of doing laundry, operating the car, and paying for cell phone service are irrelevant because they do not differ between the two alternatives.
- c. You might consider whether you would like to live with your parents again! Even though you would benefit by \$8,050 if you live at home, you may decide it isn't worth it!
- d. If you want Job #2 and you want to live at home, you will benefit by the higher salary and the lower living expenses. However, you'll need to factor in the higher costs of commuting to work via car (gas, tolls, service) or train (fare). Qualitatively, you will want to consider whether the time spent commuting is worth the extra money you will be netting from living at home.

(15-20 min.) P2-57B

Req. 1

Monthly pizza volume	2,500	5,000	10,000
Total fixed costs	\$ 5,000	\$ 5,000	\$ 5,000
Total variable costs	3,000	6,000	12,000
Total costs	<u>\$8,000</u>	<u>\$11,000</u>	<u>\$17,000</u>
Fixed cost per pizza	\$ 2.00	\$ 1.00	\$.50
Variable cost per pizza	1.20	1.20	1.20
Average cost per pizza	<u>\$ 3.20</u>	<u>\$ 2.20</u>	<u>\$ 1.70</u>
Sales price per pizza	\$5.50	\$5.50	\$5.50
Average profit per			
pizza	\$ 2.30	\$ 3.30	\$ 3.80

Req. 2

Companies want to operate near or at full capacity to better utilize the resources they spend on fixed costs. The more units they produce, the lower the average fixed cost per unit.

Req. 3

At the current volume, the restaurant's monthly profit is \$16,500

calculated as follows

Total Sales Revenue	- Total Costs	= Monthly Profit
(\$5.50 per pizza × 5,000 pizzas)	- \$11,000	= \$16,500

If the owner decreases the sales price to increase volume, the

new monthly profit will be:

Total Sales Revenue at the new price and volume	 Total Costs at the new volume 	= New Monthly Profit
(\$5.00 per pizza × 10,000 pizzas)	- \$17,000	= \$33,000

Since the restaurant will generate an additional \$16,500 of profit (333,000 - 16,500), the owner should decrease the sales price to increase the volume.

Decision Case

(30 min.) C2-58

Req. 1

The ending inventory costs derived from the following schedule are: raw materials \$113,000, work in process \$229,000, and finished goods \$154,000.

	PowerBox

Req. 2

Today's Date

PowerBox 5 Research Triangle Way Red Deer, AB T2A 3H7

Mr. Bassil Boulos Industrial Insurance 1122 Main Street Sudbury, ON P2B 4K9

Dear Mr. Boulos:

As a result of flooding, PowerBox suffered the complete loss of all inventories at its facility at 5 Research Triangle Way. Industrial Insurance covers these inventories under policy #3454340-23. Our records indicate the cost of these inventories was:

Raw materials	\$143,000
Work in process	239,000
Finished goods	150,000
Total inventory cost	<u>\$532,000</u>

Please contact me at your earliest convenience regarding our insurance claim.

Sincerely,

Annette Plum Controller Discussion & Analysis 1. Briefly describe a service company, a merchandising company, and a manufacturing company. Give an example of each type of company, but do not use the same examples as given in the chapter.

Service companies are in business to sell intangible services. Merchandising companies are in business to sell tangible products they buy from manufacturers. Manufacturing companies use labour, plant, and equipment to convert raw materials into new finished products. An accounting firm is an example of a service company; Le Chateau is an example of a merchandising company; and Johnson & Johnson is an example of a manufacturer.

2. How do service, merchandising, and manufacturing companies differ from each other? How are service, merchandising, and manufacturing companies similar to each other?

Differ:

- Inventories
- Primary output
- Customers

Student answers will vary

Similar:

- Profit motivated
- Marketing
- IFRS and ASPE

Student answers will vary

3. What is the value chain? What are the six types of business activities found in the value chain? Which type(s) of business activities in the value chain generate costs that go directly to the income statement once incurred? What type(s) of business activities in the value chain generate costs that flow into inventory on the balance sheet?

The value chain is the activities that add value to a firm's products and services. The six types of business activities in the value chair are R&D, design, production or purchases, marketing, distribution, and customer service. All costs along the value chain for service companies, all except for purchases for merchandisers, and all except for production for manufacturers. Purchases flow into inventory for a merchandiser and production flows into inventories for a manufacturer.

4. Compare direct costs to indirect costs. Give an example of a cost at a company that could be a direct cost at one level of the organization but would be considered an indirect cost at a

different level of that organization. Explain why this same cost could be both direct and indirect (at different levels).

A direct cost can be traced to a cost object whereas an indirect cost relates to the cost object but cannot be traced to it. The salary of a car sales manager is a direct cost to the sales department, but an indirect cost of the car itself. The salary of a sales manager is directly traceable to the sales department because that is the only place the manager works in the company. The salary is an indirect cost of the car because it is impossible to determine how much of it belongs to a specific car. In other words, the sales manager's salary affects the cost of all cars sold, but is not traceable to individual cars.

5. What is meant by the term "inventoriable product costs"? What is meant by the term "period costs"? Why does it matter whether a cost is an inventoriable product cost or a period cost?

Inventoriable product costs are all costs of a product that GAAP requires companies to treat as an asset (inventory) for external financial reporting. These costs are not expensed until the product is sold. Period costs are costs that are expensed in the period in which they are incurred; often called Operating Expenses, or Selling, General, and Administrative Expenses. An inventoriable product cost is treated as an asset until the product is sold; it will benefit a future period. A period cost is expensed when it is incurred as it has no future value.

6. Compare inventoriable product costs to period costs. Using a product of your choice, give examples of inventoriable product costs and period costs. Explain why you categorized your costs as you did.

Levi Strauss makes jeans. The inventoriable product costs would include denim, thread, zippers, labour, and factory overhead. All of these costs are related to the production of the jeans and are therefore inventoriable.

The costs of advertising the jeans in magazines, commissions paid to employees who sell the jeans to merchandisers, and the cost of shipping the jeans to buyers are all period costs because they are incurred once the jeans have been produced and have no future value to the company.

7. Describe how the income statement of a merchandising company differs from the income statement of a manufacturing company. Also comment on how the income statement from a merchandising company is similar to the income statement of a manufacturing company. The Cost of goods sold section of the income statement is different for a merchandiser and a manufacturer because a merchandiser buys finished goods whereas a manufacturer produces finished goods. The merchandiser uses the cost of purchases in the computation of Cost of goods sold, where the manufacturer uses the Cost of goods manufactured in the computation of Cost of goods sold. The rest of the income statement is the same for both merchandisers and manufacturers. It includes Sales revenue, Gross profit, Operating expenses, and Operating income.

8. How are the cost of goods manufactured, the cost of goods sold, the income statement, and the balance sheet related for a manufacturing company? What specific items flow from one statement or schedule to the next? Describe the flow of costs between the cost of goods manufactured, the cost of goods sold, the income statement, and the balance sheet for a manufacturing company.

The Cost of goods manufactured includes all the costs of production, direct material, direct labour, and manufacturing overhead. This amount is used in the preparation of the income statement in the computation of Cost of goods sold where it is added to beginning Finished goods inventory to determine Cost of goods available for sale. The remaining Finished goods that have not been sold is shown on the balance sheet as Inventory.

9. What makes a cost relevant or irrelevant when making a decision? Suppose a company is evaluating whether to use its warehouse for storage of its own inventory or whether to rent it out to a local theatre group for housing props. Describe what information might be relevant when making that decision.

When making a decision, a cost is considered relevant or irrelevant depending on whether it changes between the alternatives in the decision. Some relevant costs to consider in the evaluation of whether to use the warehouse for storage or whether to rent it would be the cost of storage elsewhere, how much rent could be charged for the warehouse, insurance costs, and so forth.

10. Explain why "differential cost" and "variable cost" do not have the same meaning. Give an example of a situation in which there is a cost that is a differential cost but not a variable cost.

A differential cost is the difference in cost between two alternative courses of action whereas a variable cost is a cost that changes in total in direct proportion to changes in volume. If a company was deciding between renting office space downtown (more expensive) or in the suburbs (less expensive), the cost of rent would be an example of a differential cost that is not a variable cost. Rent is a fixed cost.

Student answers may vary.

Application & Analysis Basic Discussion Questions

1. Describe the product that is being produced and the company that produces it.

The product is jeans and the company is Levi Strauss & Co.

2. Describe the six value chain business activities that this product would pass through from its inception to its ultimate delivery to the customer.

The six value chain business activities are

- R&D
- Design
- Production
- Marketing
- Distribution
- Customer Service

3. List at least three costs that would be incurred in each of the six business activities in the value chain.

- R&D-investigating new fabrics, customer needs surveys, innovation
- Design-style, quality, durability
- Production-material, labour, overhead
- Marketing–advertisements, sponsorships, Internet presence
- Distribution-shipping, administrative costs, storage

 Customer Service–warranties, call centre, customer email support

4. Classify each cost you identified in the value chain as either being an inventoriable product cost or a period cost. Explain your justification.

All the costs, with the exception of production costs, are period costs. Only the production costs are inventoriable.

5. A cost object can be anything for which managers want a separate measurement of cost. List three different potential cost objects other than the product itself for the company you have selected.

- Advertising
- Internal Control
- Environmental Sustainability

6. List a direct cost and an indirect cost for each of the three different cost objects in #5. Explain why each cost would be direct or indirect.

- Advertising
 - Direct–cost of advertising 501 brand jeans
 - Indirect–cost of advertising Levi Strauss & Co.
- Internal Control
 - Direct-cost of separating duties within a department
 - Indirect-audit committee costs for the company
- Environmental Sustainability

- Direct-zero waste within a department
- Indirect-company-wide energy efficiency

Student answers will vary.
