

SOLUTIONS MANUAL

Solutions Manual

Operations & Supply Chain Management: World Class Theory and Practice

First Edition

Rohit Verma

School of Hotel Administration, Cornell University

Kenneth K. Boyer

Fisher College of Business, Ohio State University

Introduction

This Solutions Manual has been prepared by us, the main text authors. We decided to create these solutions ourselves, rather than outsourcing the task, because we are strongly committed to the utmost accuracy in these problems and solutions. We understand the challenge that professors face when looking for accurate and thoughtful problems and solutions for their students.

In this manual, you will find the solutions to the end of chapter questions, problems, and case questions. In addition to these static problems, you can find the interactive problems on the CengageNow learning management system in the Homework section. The problems appear as they do in the text. In some cases we offer variations to the problem sets so that you can test the same concept but with different variables.

We hope that you find these solutions useful in assessing your student's knowledge of the chapter concepts. Should you find any errors, please do not hesitate to contact us:
