## Chapter 2—Production Possibilities, Opportunity Cost, and Economic Growth

### MULTIPLE CHOICE

1. Which of the following *correctly* lists the three fundamental economic questions?
- If to produce? Why to produce? When to produce?
  - If to produce? What to produce? How to produce?
  - Why to produce? What to produce? How to produce?
  - What to produce? How to produce? For whom to produce?

ANS: D                      PTS: 1                      DIF: Easy                      REF: Full: 35 | Mic: 35  
TOP: Three economic questions                      TYP: RE

2. Three basic decisions must be made by all economies. What are they?
- How much will be produced, when it will be produced, and how much it will cost.
  - What the price of each good will be, who will produce each good, and who will consume each good.
  - What will be produced, how goods will be produced, and for whom goods will be produced.
  - How the opportunity cost principle will be applied, if and how the law of comparative advantage will be utilized, and whether the production possibilities constraint will apply.

ANS: C                      PTS: 1                      DIF: Easy                      REF: Full: 35 | Mic: 35  
TOP: Three economic questions                      TYP: RE

3. Because of the problem of scarcity, each economic system must make which of the following choices?
- How to produce?
  - What to produce?
  - For whom to produce?
  - All of these.

ANS: D                      PTS: 1                      DIF: Easy                      REF: Full: 35 | Mic: 35  
TOP: Three economic questions                      TYP: RE

4. Which fundamental economic question is *most* closely related to the issues of income distribution and poverty?
- The What to Produce question.
  - The Why to Produce question.
  - The How to Produce question.
  - The For Whom to Produce question.

ANS: D                      PTS: 1                      DIF: Medium                      REF: Full: 35 | Mic: 35  
TOP: Three economic questions                      TYP: RE

5. Which fundamental economic question requires society to choose the technological and resource mix used to produce goods?
- The What to Produce question.
  - The Why to Produce question.
  - The How to Produce question.
  - The For Whom to Produce question.

ANS: C                      PTS: 1                      DIF: Medium                      REF: Full: 35 | Mic: 35  
TOP: Three economic questions                      TYP: RE

6. The opportunity cost of an action is:
- the monetary payment the action required.
  - the total time spent by all parties in carrying out the action.
  - the value of the best opportunity that must be sacrificed in order to take the action.
  - the cost of all alternative actions that could have been taken, added together.

ANS: C                      PTS: 1                      DIF: Medium                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: SA

7. The highest valued alternative that must be given up in order to choose an option is called the:
- opportunity cost.
  - utility cost.
  - scarcity expense.
  - disutility option.

ANS: A                      PTS: 1                      DIF: Easy                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: RE

8. Which of the following sayings best reflects the concept of opportunity cost?
- "You can't teach an old dog new tricks."
  - "There is no such thing as a free lunch."
  - "I have a baker's dozen."
  - "There's no business like show business."

ANS: B                      PTS: 1                      DIF: Medium                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: SA

9. The opportunity cost to a city for using local tax revenues to construct a new park is the:
- best alternative foregone by building the park.
  - dollar cost of constructing the new park.
  - dollar cost of the old park.
  - increased taxes necessary to pay for maintenance of the new park.

ANS: A                      PTS: 1                      DIF: Easy                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: SA

10. A good or service that is forgone by choosing one alternative over another is called a(n):
- explicit cost.
  - opportunity cost.
  - historical cost.
  - accounting cost.

ANS: B                      PTS: 1                      DIF: Easy                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: RE

11. Opportunity cost is the:
- cost incurred when one fails to take advantage of an opportunity.
  - price paid for goods and services.
  - cost of the best option forgone as a result of choosing an alternative option.
  - undesirable aspects of an option.

ANS: C                      PTS: 1                      DIF: Easy                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: RE

12. The opportunity cost of a purchase is:
- the selling price of the good or service.

- b. zero if the good or service satisfies a need.
- c. greater for persons who are rich.
- d. the good or service given up for the good or service purchased.

ANS: D                      PTS: 1                      DIF: Easy                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: SA

13. The opportunity cost of watching television is:
- a. all of the alternative programs that appear on other stations.
  - b. zero because there is no money expenditure involved.
  - c. the alternative use of the time foregone by watching the program.
  - d. zero if it benefits you.

ANS: C                      PTS: 1                      DIF: Easy                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: RE

14. Which of the following does *not* illustrate opportunity cost?
- a. If I study, I must give up going to the football game.
  - b. If I buy a computer, I must do without a 35" television.
  - c. *More* consumer spending now means *more* spending in the future.
  - d. If I spend more on clothes, I must spend less on food.

ANS: C                      PTS: 1                      DIF: Easy                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: SA

15. Which of the following does *not* illustrate opportunity cost?
- a. If I study, I must give up going to the football game.
  - b. If I buy a computer, I must do without a 35" television.
  - c. If I spend more on clothes, I must spend less on food.
  - d. All of these illustrate opportunity cost.

ANS: D                      PTS: 1                      DIF: Easy                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: SA

16. The opportunity cost of an economic decision is:
- a. the best alternative that was sacrificed.
  - b. the amount of money needed to implement the decision.
  - c. any land, labor, and capital that are wasted.
  - d. all options that were lost due to scarcity.

ANS: A                      PTS: 1                      DIF: Easy                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: RE

17. Bill has \$10 to spend on a Superman, Batman, or an X-Men T-shirt. Bill buys the Superman T-shirt and the Batman shirt was a close second choice. What is the opportunity cost?
- a. The amount he spent, \$10.
  - b. Nothing, since he got his preferred choice.
  - c. The Batman T-shirt.
  - d. The X-Men T-shirt.

ANS: C                      PTS: 1                      DIF: Medium                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: SA

18. On a production possibilities curve, the opportunity cost of good X, in terms of good Y, is represented by the:
- a. distance to the curve from the vertical axis.

- b. distance to the curve from the horizontal axis.
- c. movement along the curve.
- d. all of these.

ANS: C                      PTS: 1                      DIF: Medium                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: SA

19. Which of the following statements is *true*?
- a. An opportunity cost is what must be given up in order to get something else.
  - b. The three fundamental economic questions refer to What to produce? How to produce? and When to produce?
  - c. The term "investment" refers to the purchase of stocks and bonds and other financial securities.
  - d. The law of increasing opportunity cost implies that as production of one type of good is expanded then fewer and fewer of other goods must be given up.

ANS: A                      PTS: 1                      DIF: Easy                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: RE

20. The amount of a good that must be given up to produce another good is the concept of:
- a. scarcity.
  - b. specialization.
  - c. trade.
  - d. efficiency.
  - e. opportunity cost.

ANS: E                      PTS: 1                      DIF: Easy                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: RE

21. The opportunity cost of an activity means the:
- a. amount of money the activity costs.
  - b. number of hours that is required to engage in this activity.
  - c. expected gains by engaging in the activity.
  - d. amount of other things that must be sacrificed in order to engage in the activity.
  - e. expected gains minus the expected costs of engaging in the activity.

ANS: D                      PTS: 1                      DIF: Medium                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: RE

22. In the context of the production possibilities curve, opportunity cost is measured in:
- a. dollars paid for the goods.
  - b. the quantity of other goods given up.
  - c. the value of the resources used.
  - d. changing technology.
  - e. units of satisfaction.

ANS: B                      PTS: 1                      DIF: Medium                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: SA

23. Mikki decides to work five hours the night before her economics exam. She earns an extra \$75, but her exam score is 10 points lower than it would have been had she stayed home and studied. Her opportunity cost is the:
- a. five hours she worked.
  - b. \$75 she earned.
  - c. 10 points she lost on her exam.

- d. time she could have spent watching television.
- e. guilt she feels about neglecting her economics studies.

ANS: C                      PTS: 1                      DIF: Medium                      REF: Full: 36 | Mic: 36  
 TOP: Opportunity cost                      TYP: SA

24. When the opportunity cost of producing carrots increases as more carrots are produced, then:
- a. no more carrots will be produced.
  - b. resources are equally suited to the production of carrots and to other goods.
  - c. the production possibilities curve is a straight line.
  - d. the production possibilities curve becomes positively sloped.
  - e. the law of increasing costs is present.

ANS: E                      PTS: 1                      DIF: Difficult                      REF: Full: 36 | Mic: 36  
 TOP: Opportunity cost                      TYP: CA

25. The opportunity cost of your college education is:
- a. c and d.
  - b. d and e.
  - c. the actual dollar cost of your college education.
  - d. your best alternative use of the money you spend for a college education.
  - e. money you could have earned working instead of going to college.

ANS: B                      PTS: 1                      DIF: Medium                      REF: Full: 36 | Mic: 36  
 TOP: Opportunity cost                      TYP: SA

26. The law of increasing costs indicates that the opportunity cost of producing a good:
- a. is proportional to the production of the good.
  - b. is constant to the production of the good.
  - c. increases as more of the good is produced.
  - d. decreases as more of the good is produced.
  - e. increases as less of the good is produced.

ANS: C                      PTS: 1                      DIF: Medium                      REF: Full: 36 | Mic: 36  
 TOP: Opportunity cost                      TYP: CA

27. The amount of a good that is given up to produce another good is:
- a. its dollar cost.
  - b. its opportunity cost.
  - c. its relative cost.
  - d. its absolute cost.
  - e. all of these.

ANS: B                      PTS: 1                      DIF: Easy                      REF: Full: 36 | Mic: 36  
 TOP: Opportunity cost                      TYP: RE

**Exhibit 2-1 Production possibilities curve data**

Consumption Goods	Capital Goods
10	0
9	1
7	2
4	3
0	4

28. In Exhibit 2-1, according to the information, the opportunity cost of producing 3 units of capital is:
- 3 units of consumption goods.
  - 4 units of consumption goods.
  - 6 units of consumption goods.
  - 7 units of consumption goods.

ANS: A                      PTS: 1                      DIF: Medium                      REF: Full: 36 | Mic: 36  
 TOP: Opportunity cost                      TYP: SA

29. In Exhibit 2-1, the opportunity cost of producing the fourth unit of capital is:
- 0.
  - 1 unit of consumption goods.
  - 2 units of consumption goods.
  - 4 units of consumption goods.
  - there is not enough information to estimate the opportunity cost.

ANS: D                      PTS: 1                      DIF: Medium                      REF: Full: 36 | Mic: 36  
 TOP: Opportunity cost                      TYP: SA

**Exhibit 2-2 Production possibilities curve**

30. The production possibilities in Exhibit 2-2 indicates that the opportunity cost of corn is:
- increasing.
  - decreasing.
  - zero.
  - constant.
  - indeterminate.

ANS: D                      PTS: 1                      DIF: Difficult                      REF: Full: 36 | Mic: 36  
 TOP: Opportunity cost                      TYP: CA

31. In Exhibit 2-2, the slope of the production possibilities curve indicates that the opportunity cost of:
- coffee is constant.
  - coffee is increasing.
  - coffee is decreasing.
  - corn is increasing.
  - corn is decreasing,

ANS: A                      PTS: 1                      DIF: Difficult                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: CA

32. In Exhibit 2-2, the opportunity cost of coffee when moving from A to B is:
- 2 million bushels of corn.
  - 6 million bushels of corn.
  - 8 million bushels of corn.
  - 14 million bushels of corn.
  - it is not possible to determine.

ANS: A                      PTS: 1                      DIF: Medium                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: SA

33. In Exhibit 2-2, the opportunity cost of coffee when moving from A to B is:
- the same as moving from A to C.
  - the same as moving from A to D.
  - the same as moving from B to D.
  - the same as moving from B to C.
  - it is not possible to determine.

ANS: D                      PTS: 1                      DIF: Difficult                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: CA

34. A farmer is deciding whether or not to add fertilizer to his or her crops. If the farmer adds 1 pound of fertilizer per acre, the value of the resulting crops rises from \$80 to \$100 per acre. According to marginal analysis, the farmer should add fertilizer if it costs less than:
- \$12.50 per pound.
  - \$20 per pound.
  - \$80 per pound.
  - \$100 per pound.

ANS: B                      PTS: 1                      DIF: Medium                      REF: Full: 37 | Mic: 37  
TOP: Marginal analysis                      TYP: SA

35. In economics, the term marginal refers to:
- the change or difference from a current situation.
  - man-made resources as opposed to natural resources.
  - the satisfaction a consumer receives from a good.
  - holding everything else constant in the analysis.

ANS: A                      PTS: 1                      DIF: Easy                      REF: Full: 37 | Mic: 37  
TOP: Marginal analysis                      TYP: RE

36. When deciding whether to buy a second car, marginal analysis indicates that the purchaser should compare the:
- benefits expected from two cars with the cost of both.
  - additional benefits expected from a second car with the cost of the two cars.
  - dollar cost of the two cars with the potential income that the cars will generate.
  - additional benefits of the second car with the additional cost of the second car.

ANS: D                      PTS: 1                      DIF: Difficult                      REF: Full: 37 | Mic: 37  
TOP: Marginal analysis                      TYP: CA

37. While waiting in line to buy two tacos at 80 cents each and a medium drink for 90 cents, Jordan notices that the restaurant has a value meal containing three tacos and a medium drink all for \$3. For Jordan, the marginal cost of the third taco would be:
- zero.
  - 50 cents.
  - 80 cents.
  - \$1.

ANS: B                      PTS: 1                      DIF: Difficult                      REF: Full: 37 | Mic: 37  
TOP: Marginal analysis                      TYP: CA

38. While waiting in line to buy a cheeseburger for \$2 and a drink for 75 cents, Aaron notices that the restaurant has a value meal containing a cheeseburger, drink, and French fries for \$3. For Aaron, the marginal cost of purchasing the French fries:
- would be zero.
  - would be 25 cents.
  - would be 50 cents.
  - cannot be determined because the information about the price of the French fries is not provided.

ANS: B                      PTS: 1                      DIF: Difficult                      REF: Full: 37 | Mic: 37  
TOP: Marginal analysis                      TYP: CA

39. While waiting in line to buy one cheeseburger for \$1.50 and a medium drink for \$1.00, Sally notices that she could get a value meal that contains both the cheeseburger and medium drink and also a medium order of fries for \$2.75. She thinks to herself, "Is it worth the extra 25 cents to get the medium fries?" To an economist, Sally's decision is an example of:
- marginal analysis.
  - basing decisions on total, rather than marginal, value.
  - an unintended consequence.
  - the fallacy of composition.

ANS: A                      PTS: 1                      DIF: Medium                      REF: Full: 37 | Mic: 37  
TOP: Marginal analysis                      TYP: SA

40. Just before class, Jim tells Stuart, "Stuart, you shouldn't skip class today because you have paid tuition to enroll in the class." Stuart ignores Jim's advice, and instead makes the decision of whether to attend based on the importance to his grade that he feels he'd be missing that day in class relative to his value of the extra time he could have to finish the video game he is playing. To an economist, Stuart is:
- using marginal analysis.
  - ignoring the total value of attending class.
  - ignoring the concept of opportunity cost.
  - irresponsible.

ANS: A                      PTS: 1                      DIF: Difficult                      REF: Full: 37 | Mic: 37  
TOP: Marginal analysis                      TYP: CA

41. Susan wishes to buy gasoline and have her car washed. She finds that if she buys 9 gallons of gasoline at \$1.50 per gallon, the car wash costs \$1, but if she buys 10 gallons of gasoline, the car wash is free. For Susan, the marginal cost of the tenth gallon of gasoline is:
- zero.
  - 50 cents.
  - \$1.
  - \$1.50.

ANS: B                   PTS: 1                   DIF: Difficult           REF: Full: 37 | Mic: 37  
TOP: Marginal analysis                   TYP: CA

42. Ralph wants to buy some milk and a box of cereal. If Ralph buys 2 quarts of milk at \$1 per quart, the box of cereal costs 75 cents. If he buys 3 quarts of milk at \$1 per quart, the box of cereal is free. For Ralph, the marginal cost of the third quart of milk is:
- zero.
  - 25 cents.
  - 75 cents.
  - \$1.

ANS: B                   PTS: 1                   DIF: Difficult           REF: Full: 37 | Mic: 37  
TOP: Marginal analysis                   TYP: CA

43. A local restaurant offers an "all you can eat" Sunday brunch for \$12. Susan eats four servings, but leaves half of a fifth helping uneaten. Why?
- Her marginal value of a serving of brunch has fallen below \$12.
  - Her marginal value of a serving has fallen below \$2.36 (\$12 divided by 5 servings).
  - Her marginal value of food has fallen to zero.
  - The total value she places on brunch today exactly equals \$12.

ANS: C                   PTS: 1                   DIF: Difficult           REF: Full: 37 | Mic: 37  
TOP: Marginal analysis                   TYP: CA

44. According to marginal analysis, you should spend more time studying economics if the extra benefit from an additional hour of study:
- is positive.
  - outweighs the extra cost.
  - exceeds the benefits of the previous hour of study.
  - will raise your exam score.

ANS: B                   PTS: 1                   DIF: Easy               REF: Full: 37 | Mic: 37  
TOP: Marginal analysis                   TYP: RE

45. If an economy is operating at a point inside the production possibilities curve,
- its resources are not being used efficiently.
  - the curve will begin to shift inward.
  - the curve will begin to shift outward.
  - This is a trick question because an economy cannot produce at a point inside the curve.

ANS: A                   PTS: 1                   DIF: Medium           REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve           TYP: SA

46. Which of the following most accurately indicates the implications of an economy's production possibilities curve?
- If all the resources of an economy are being used efficiently, more of one good can be produced only if less of another good is produced.
  - If all the resources of an economy are being used efficiently, it is generally possible to produce more of one good without having to sacrifice the production of other goods.
  - Over time, it is generally impossible for a country to expand its production of goods.
  - An economy will automatically move toward a point that lies outside of the production possibilities constraint unless proper government policy constrains production.

ANS: A                   PTS: 1                   DIF: Medium           REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve           TYP: SA

47. Which of the following is true of the production possibilities curve?
- It assumes a fixed level of technology.
  - It assumes resources are fixed.
  - It assumes resources are fully employed.
  - All of these are correct.

ANS: D                      PTS: 1                      DIF: Easy                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: RE

48. After the terrorist attacks on September 11, 2001, the United States began devoting substantial resources toward the War on Terrorism, homeland security, and relief efforts. As long as our resources were being used efficiently, the production possibilities curve would suggest that:
- we will have to give up the production of other goods that could have been produced with these resources.
  - we will be able to produce the same amount of other goods as before.
  - the military spending will result in an outward shift in the production possibilities curve but that the relief effort will result in an offsetting inward shift.
  - we will be unable to devote the resources necessary toward these efforts unless there is an improvement in technology.

ANS: A                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: SA

49. A point outside the production possibilities curve represents a combination of goods that is:
- inefficient.
  - efficient.
  - unattainable.
  - attainable.

ANS: C                      PTS: 1                      DIF: Easy                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: RE

50. Which of the following will be most likely to cause the production possibilities curve for a country to shift inward?
- an increase in the labor force
  - an increase in unemployment
  - development of an improved technological method of production
  - a decrease in the stock of physical capital

ANS: D                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: SA

51. In Europe during the 14th century, the Black Plague killed 24 million people or close to 37 percent of the population. How would this affect the production possibilities curves for the countries of Europe at that time?
- The production possibilities curves for these countries would have shifted outward.
  - The production possibilities curves for these countries would have shifted inward.
  - The production possibilities curves for these countries would have been unaffected.
  - This would have been illustrated by a movement along the production possibilities curves for these countries, but it would not have shifted them.

ANS: B                      PTS: 1                      DIF: Easy                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: SA

52. Which of the following would be *least* likely to cause the production possibilities curve to shift outward?
- a decreased desire for leisure by workers in the economy.
  - an invention that requires fewer resources to produce a good.
  - a shift in consumer preferences that causes expansion in the output of one product and a decline in output of other products.
  - an expansion in the man-made productive resources available to the economy as the result of a high rate of investment.

ANS: C                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: CA

53. Using a production possibilities curve, a technological advance that increases the amount of output for the same amount of inputs would be illustrated as a(n):
- flattening of the curve.
  - movement from one point to another point along the curve.
  - outward shift of the curve.
  - movement from a point on the curve to a point inside the curve.

ANS: C                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: CA

54. The production possibilities curve shows that:
- some of one good must be given up to get more of another good in an economy that is operating efficiently.
  - no output combination is impossible.
  - an economy that is operating efficiently can have more of one good without giving up some of another good.
  - scarcity can be eliminated.

ANS: A                      PTS: 1                      DIF: Easy                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: RE

55. Any point on the production possibilities curve illustrates:
- minimum production combinations.
  - maximum production combinations.
  - economic growth.
  - a nonfeasible production combination.

TOP: Production possibilities curve                      TYP: SA

56. Production possibilities curve analysis includes the idea of:
- opportunity cost.
  - scarcity.
  - maximum production choices.
  - all of these.

ANS: D                      PTS: 1                      DIF: Easy                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: RE

57. An efficient economy:
- uses available resources fully.
  - uses the best division of labor.
  - produces an output combination at some point along the production possibility curve.

d. all of these.

ANS: D                      PTS: 1                      DIF: Easy                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: SA

58. A production possibility graph slopes down because of:
- the law of increasing costs.
  - nonhomogeneous resources.
  - inefficiency.
  - improper output mix.
  - unemployment.

ANS: B                      PTS: 1                      DIF: Difficult                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: CA

59. The production possibility curve is bowed outward from the origin because of:
- the law of increasing opportunity costs.
  - the finite nature of the resource base.
  - inefficiency.
  - improper output mix.
  - unemployment.

ANS: A                      PTS: 1                      DIF: Difficult                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: CA

60. The production possibilities curve demonstrates the basic economic principle that:
- market-based economies are more efficient.
  - supply will determine demand in the economy.
  - the production of more capital goods this year will cause the economy to produce less consumption goods next year.
  - to produce more of any one thing, assuming full employment, the economy must produce less of something else.
  - to produce more consumption goods this year requires the production of more capital goods this year.

ANS: D                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: SA

61. A production possibilities curve shows the various:
- prices that can be charged for capital and consumption goods.
  - combinations of prices and outputs that can be produced.
  - combinations of goods the economy has the capacity to produce.
  - combinations of resources and prices that the economy can produce.

ANS: C                      PTS: 1                      DIF: Difficult                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: SA

62. A production possibilities curve has "good X" on the horizontal axis and "good Y" on the vertical axis. On this diagram, the opportunity cost of good X, in terms of good Y, is represented by the:
- distance to the curve from the horizontal axis.
  - distance to the curve from the vertical axis.
  - distance from the origin to the curve.
  - change in Y for each change in X along the curve.

ANS: D                      PTS: 1                      DIF: Difficult                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: SA

63. Of factors which affect any economy's production potential, the *best* two listed below are:
- resources and technology.
  - prices and outputs.
  - wages and prices.
  - taxes and prices.
  - resources and prices.

ANS: A                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38

TOP: Production possibilities curve                      TYP: SA

64. The various combinations of goods and services that can be produced, when an economy uses its available resources and technology efficiently, is called:
- scarcity.
  - opportunity cost.
  - unlimited production.
  - capital accumulation.
  - production possibilities.

ANS: E                      PTS: 1                      DIF: Difficult                      REF: Full: 38 | Mic: 38

TOP: Production possibilities curve                      TYP: CA

65. A production possibilities curve shows the:
- dollar costs of producing two different goods.
  - amounts of labor and capital needed to produce one good.
  - various combinations of goods that can be produced.
  - prices of different goods that are produced in an economy.
  - inefficient use of available resources and technology.

ANS: C                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38

TOP: Production possibilities curve                      TYP: RE

66. What shape is the production possibilities curve usually expected to exhibit?
- Upward-sloping.
  - Bowed out.
  - Bowed in.
  - Straight line.
  - U-shaped.

ANS: B                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38

TOP: Production possibilities curve                      TYP: RE

67. When the production possibilities curve is bowed out, resources are:
- equally well-suited to production of both goods.
  - not being used efficiently.
  - not equally suited to the production of both types of goods.
  - increasing as more of one good is produced.
  - of an inferior quality.

ANS: C                      PTS: 1                      DIF: Difficult                      REF: Full: 38 | Mic: 38

TOP: Production possibilities curve                    TYP: SA

70. The production possibilities curve illustrates all of the following concepts *except*:
- a. the law of increasing costs.
  - b. unlimited wants.
  - c. scarcity.
  - d. opportunity cost.
  - e. availability of resources.

ANS: B                    PTS: 1                    DIF: Difficult                    REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                    TYP: CA

71. The production possibilities curve depicts the various combinations of two goods that can be:
- a. interchanged among two countries.
  - b. produced with a given technology.
  - c. consumed with a given quantity of resources.
  - d. produced with increments in resources and changes in technology.
  - e. consumed as the resources increase.

ANS: B                    PTS: 1                    DIF: Medium                    REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                    TYP: SA

72. Efficient production means producing:
- a. less than feasible output for a given amount of resources.
  - b. more than feasible output for a given amount of resources.
  - c. the maximum feasible output for a given amount of resources.
  - d. no more than what is needed.
  - e. in excess of what is needed.

ANS: C                    PTS: 1                    DIF: Easy                    REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                    TYP: SA

73. The law of increasing costs holds that the opportunity cost:
- a. of a good decreases as the quantity of the good produced increases.
  - b. of a good is proportional to the resources used in its production.
  - c. of a good increases as more of the good is produced.
  - d. of a good does not change with the resources used its production.
  - e. changes as more of the good is produced.

ANS: C                    PTS: 1                    DIF: Medium                    REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                    TYP: CA

74. If an economy is producing at full employment, it means that:
- there are idle resources in this economy.
  - the production is not efficient.
  - the economy is producing along its production possibilities curve.
  - the economy is producing at a point that is to the left of the production possibilities curve.
  - the economy is producing at a point that is to the right of the production possibilities curve.

ANS: C                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: CA

75. Which of the following is *not true* about a production possibilities curve? The curve:
- indicates the combinations of goods and services that can be produced with given technology.
  - indicates the efficient production points.
  - indicates the non-efficient production points.
  - indicates the feasible (attainable) and non-feasible production points.
  - indicates which production point will be chosen.

ANS: E                      PTS: 1                      DIF: Difficult                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: CA

76. Which of the following is *true* about the production possibilities curve when a technological progress occurs? The curve:
- shifts inwards to the left.
  - becomes flatter at one end and steeper at the other end.
  - becomes steeper.
  - shifts outward to the right.
  - does not change.

ANS: D                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: SA

77. A point inside a production possibilities curve reflects:
- the law of increasing costs.
  - technological innovation.
  - less than full use of resources and technology.
  - economic efficiency.
  - a way to increase future economic growth.

ANS: C                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: SA

78. A point outside a production possibilities curve reflects:
- efficiency.
  - specialization.
  - inefficiency.
  - unemployment.
  - an impossible choice.

ANS: E                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                      TYP: SA

79. Any point inside the production possibility curve is:

- a. efficient.
- b. nonfeasible.
- c. inefficient.
- d. optimal.

ANS: C                    PTS: 1                    DIF: Medium                    REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                    TYP: SA

80. Using a production possibilities curve, an economy that produces an output combination less than the maximum possible is depicted by a point located:
- a. at the top corner of the curve.
  - b. near the middle of the curve.
  - c. at the bottom corner of the curve.
  - d. outside the curve.
  - e. inside the curve.

ANS: E                    PTS: 1                    DIF: Easy                    REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                    TYP: SA

81. One of the assumptions underlying the production possibilities curve for any given economy is that:
- a. the state of technology changes.
  - b. there is an unlimited supply of resources.
  - c. there is full employment of resources when the economy is on the curve.
  - d. goods can be produced outside the curve.

ANS: C                    PTS: 1                    DIF: Difficult                    REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                    TYP: CA

82. Which of the following would be *most* likely to cause the production possibilities curve for computers and education to shift outward?
- a. A choice of more computers and less education.
  - b. A choice of more education and less computers.
  - c. A reduction in the labor force.
  - d. An increase in the quantity of resources.

ANS: D                    PTS: 1                    DIF: Medium                    REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                    TYP: SA

83. Given a production possibilities curve, a point:
- a. inside the curve represents unemployment.
  - b. on the curve represents full employment.
  - c. outside the curve is currently unattainable.
  - d. all of these.

ANS: D                    PTS: 1                    DIF: Medium                    REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                    TYP: SA

84. All points on the production possibilities curve are:
- a. unattainable.
  - b. fair.
  - c. efficient.
  - d. optimal.

TOP: Production possibilities curve                    TYP: RE

85. As production of a good increases, opportunity costs rise because:
- there will be more inefficiency.
  - people always prefer having more goods.
  - of inflationary pressures.
  - workers are not equally suited to all tasks.

ANS: D                      PTS: 1                      DIF: Difficult                      REF: Full: 38 | Mic: 38  
 TOP: Production possibilities curve                      TYP: CA

86. If society leaves some of its resources unemployed, then it will be operating at a point:
- beneath its production possibilities curve.
  - at a corner of its production possibilities curve.
  - anywhere along its production possibilities curve.
  - outside of its production possibilities curve.

ANS: A                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38  
 TOP: Production possibilities curve                      TYP: SA

87. The law of increasing opportunity costs causes the production possibilities curve to:
- be a straight line.
  - slope upwards.
  - have a bowed-out shape.
  - shift inward.

ANS: C                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38  
 TOP: Production possibilities curve                      TYP: SA

88. Along a production possibilities curve showing capital and consumption goods production, which of the following pairs are being held fixed?
- Unemployment and capital goods production.
  - Number of resources and consumption goods production.
  - Composition of the economy's output and number of resources.
  - Capital and consumption goods production.
  - Technology and number of resources.

ANS: E                      PTS: 1                      DIF: Difficult                      REF: Full: 38 | Mic: 38

**Exhibit 2-6 Production possibilities curve data**

	<b>A</b>	<b>B</b>	<b>C</b>	<b>D</b>	<b>E</b>	<b>F</b>
<b>Capital goods</b>	150	140	120	90	50	0
<b>Consumer goods</b>	0	20	40	60	80	100

93. In Exhibit 2-6, the concept of increasing opportunity costs is represented by the fact that:
- the quantity of capital goods produced must be less than 150.
  - the quantity of consumer goods is constant for each change in the quantity of capital goods produced.
  - greater amounts of capital goods must be sacrificed to produce each additional unit of consumer goods.
  - the amount of consumer goods produced must be greater than zero.

ANS: C                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38  
 TOP: Production possibilities curve                      TYP: SA

**Exhibit 2-7 Production possibilities curve**

94. For the economy shown in Exhibit 2-7, which of the following is *true* when the economy is at point A?
- More cars are being produced than are needed.
  - There must be resources that are not being used fully.
  - Some car production must be forgone in order to produce more grain in the same period.
  - Increased grain production would be impossible.

ANS: C                      PTS: 1                      DIF: Medium                      REF: Full: 38 | Mic: 38  
 TOP: Production possibilities curve                      TYP: SA

95. For the economy shown in Exhibit 2-7 to operate at point C, it must:
- be willing to lower the price of grain.
  - use its given resources more efficiently than it would at point A.
  - experience resource unemployment.
  - experience an increase in its resources and/or an improvement in its technology.

ANS: D                      PTS: 1                      DIF: Easy                      REF: Full: 38 | Mic: 38

165. A nation can accelerate its economic growth by:
- reducing the number of immigrants allowed into the country.
  - adding to its stock of capital.
  - printing more money.
  - imposing tariffs and quotas on imported goods.

TOP: Three economic questions                      TYP: RE

2. When making a rational decision which requires the consideration of costs and benefits involved, the opportunity cost of a decision is often not taken into consideration when indeed it should be.

ANS: T                      PTS: 1                      DIF: Difficult                      REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                      TYP: CA

3. An opportunity cost is the highest valued alternative foregone whenever one chooses an alternative.

ANS: T                    PTS: 1                    DIF: Medium            REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                    TYP: RE

4. The opportunity cost of producing a good or service is the good or service that is foregone by choosing to produce another good with the same resources in a given period of time.

ANS: T                    PTS: 1                    DIF: Easy                REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                    TYP: RE

5. The opportunity cost of attending a movie is the purchase price of a ticket.

ANS: F                    PTS: 1                    DIF: Easy                REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                    TYP: SA

6. Every economic choice has an opportunity cost.

ANS: T                    PTS: 1                    DIF: Medium            REF: Full: 36 | Mic: 36  
TOP: Opportunity cost                    TYP: RE

7. The basic approach in marginal analysis is to compare a policy's total benefits with its total costs.

ANS: F                    PTS: 1                    DIF: Easy                REF: Full: 37 | Mic: 37  
TOP: Marginal analysis                    TYP: RE

8. Marginal analysis examines the effects of additions to or subtractions from a current situation.

ANS: T                    PTS: 1                    DIF: Easy                REF: Full: 37 | Mic: 37  
TOP: Marginal analysis                    TYP: RE

9. If more of one good can be produced without producing less of another output, the economy must have been operating efficiently.

ANS: F                    PTS: 1                    DIF: Difficult            REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                    TYP: SA

10. If some resources went to waste rather to use in production, the economy would operate outside its production possibility curve.

ANS: F                    PTS: 1                    DIF: Easy                REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                    TYP: RE

11. Each and every point along a production possibilities curve represents an efficient output option for an economy.

ANS: T                    PTS: 1                    DIF: Easy                REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                    TYP: RE

12. If some resources were used inefficiently, the economy would operate outside its production possibilities curve.

ANS: F                    PTS: 1                    DIF: Difficult            REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve                    TYP: CA

13. Of all the points on the production possibilities curve, only one point represents an efficient point.

ANS: F                   PTS: 1                   DIF: Difficult           REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve           TYP: CA

14. The most efficient point on the production possibilities curve is the midpoint on the curve.

ANS: F                   PTS: 1                   DIF: Difficult           REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve           TYP: CA

15. On the production possibilities curve, a movement between points that yields a loss of one good in order to raise the output of another good will maintain efficient production.

ANS: T                   PTS: 1                   DIF: Difficult           REF: Full: 38 | Mic: 38  
TOP: Production possibilities curve           TYP: CA

16. All points on the production possibilities curve represent efficient levels of production.

TOP: Investment           TYP: RE

## ESSAY

1. Discuss the three fundamental economic questions that all nations must address.

ANS:

The three fundamental economic questions are the "What," "How," and "For Whom" questions which must be addressed by all societies. The "What" question pertains to what should the nation produce. What combination of goods would be best? How should that combination of goods be produced is the "How" question. We want to produce goods in the most efficient manner in order to maximize production. The "For Whom" question addresses for whom should these goods be produced. Who will get them?

PTS: 1                      REF: Full: 35 | Mic: 35

2. Why are all costs really "opportunity costs"?

ANS:

An opportunity cost is what must be given up in order to get something else. Although it is convenient to measure many costs in monetary terms, ultimately all costs (some of which cannot be easily measured in monetary terms) are opportunity costs because there is always something that must be given up in order to get something else.

PTS: 1                      REF: Full: 36 | Mic: 36

3. What can a nation do to increase its economic growth? Why is economic growth among the major national economic goals of all countries?

ANS:

A nation must increase its production possibilities in order to experience economic growth. Ingredients for economic growth include capital accumulation, investment in the labor force to increase productivity, investment in technology, and promoting the entrepreneurial spirit. Economic growth is a major national economic goal of all nations because it increases the average absolute standard of living for the nation.

PTS: 1                      REF: Full: 42 | Mic: 42

4. Graphically express a production possibilities curve. What do points on, inside and outside the curve represent? What does a rightward shift of the curve represent? How is economic growth expressed in terms of the production possibilities model?

ANS:

The production possibilities curve will bow out from the origin. A point on the curve represents efficiency. A point inside represents inefficiency. A point outside the curve is currently unattainable (it is a combination of production we cannot currently produce given our limited resources and technology; although that point may be attainable if we acquire more resources, technology, or generally increase our production possibilities). A rightward shift in the curve represents an increase in production possibilities. Because economic growth means an increase in a nation's production possibilities over time, then it is expressed as a rightward shift of the production possibilities curve.
