101. On January 1 of the current year, Bob's Lawn Care Service reported owner's capital totaling \$122,500. During the current year, total revenues were \$96,000 while total expenses were \$85,500. Also, during the current year Bob withdrew \$20,000 from the company. No other changes in equity occurred during the year. If, on December 31 of the current year, total assets are \$196,000, the *change* in owner's capital during the year was:

**A.** A decrease of \$9,500.

B. An increase of \$9,500.

C. An increase of \$30,500.

D. A decrease of \$30,500

E. Impossible to determine from the information provided.

During the year, revenues were \$96,000 while expenses were \$85,500 and withdrawals were \$20,000. Since there were no other changes in equity, equity must have decreased by \$9,500.

- 110. At the end of the current year, Norman Company reported total liabilities of \$300,000 and total equity of \$100,000. The company's debt ratio on the last year-end was:
- A. 300%.
- B. 33.3%
- <u>C.</u> 75.0%.
- D. \$400,000.
- E. Cannot be determined from the information provided.

On the last year-end, total liabilities were \$300,000 and total equity was \$100,000. That means total assets were \$400,000. Therefore, the debt to assets ratio was \$300,000 / \$400,000 or 75.0%.

111. At the beginning of the current year, Taunton Company's total assets were \$248,000 and its total liabilities were \$175,000. During the year, the company reported total revenues of \$93,000, total expenses of \$76,000 and owner withdrawals of \$5,000. There were no other changes in owner's capital during the year and total assets at the end of the year were \$260,000. Taunton Company's debt ratio at the end of the current year is:

A. 70.6%.

**B.** 67.3%.

C. 32.7%.

D. 48.6%.

E. Cannot be determined from the information provided.

If total assets were \$248,000 and total liabilities were \$175,000, total equity was \$73,000 at the beginning of the period. Add to that figure \$93,000 of revenues during the year and subtract \$76,000 of expenses and \$5,000 of withdrawals during the year and equity obviously ended the year at \$85,000. If total assets at the end of the year were \$260,000 and total equity was \$85,000, total liabilities were \$175,000. Thus, the debt ratio was \$175,000 / \$260,000 = 67.3%.

#### **Short Answer Questions**

#### 139. List the steps in processing transactions.

Business transactions and events are the starting point. Source documents are analyzed for the effects of the transactions and events on the accounting records. The information is recorded into the journal. The information is then posted to the accounts and a trial balance is prepared. The final step is the preparation of financial statements and reports for decision makers.

AACSB: Communications AICPA BB: Industry AICPA FN: Decision Making Difficulty: Medium Learning Objective: C1

140. Describe source documents and their purpose.

Source documents are the sources of information that identify and describe transactions and events. They provide objective and reliable evidence about transactions and their amounts. Examples of source documents include checks, invoices, sales receipts, credit card statements, and bank statements. They can be in hard copy or electronic form.

AACSB: Communications AICPA BB: Industry AICPA FN: Decision Making Difficulty: Medium Learning Objective: C2

141. Explain how accounts are used in recording information about transactions.

Accounts are classified into three general categories: assets, liabilities and equity. Accounts are records of increases and decreases of specific items in these categories. The accounts serve as the information resource for financial statements and reports.

AACSB: Communications AICPA BB: Industry AICPA FN: Decision Making Difficulty: Medium Learning Objective: C3

142. Explain the difference between a ledger and a chart of accounts.

A ledger is a record containing all of the accounts of a business and their balances. The chart of accounts is a list of all of the accounts in the ledger that includes an identification number for the accounts.

AACSB: Communications AICPA BB: Industry AICPA FN: Decision Making Difficulty: Medium Learning Objective: C4

143. Explain debits and credits and their role in the accounting system.

Debit refers to the left side of an account and credit refers to the right side of an account. Debits and credits are part of the double-entry accounting system. This system is based on the concept that all transactions and events affect at least two accounts. The double entry system is organized around the accounting equation which states that assets = liabilities + equity. Assets and expenses have normal debit balances, and liabilities, owner's equity and revenues have normal credit balances

AACSB: Communications AICPA BB: Industry AICPA FN: Decision Making Difficulty: Hard Learning Objective: C5

144. Explain the debt ratio and its use in analyzing a company's financial condition.

The debt ratio is calculated by dividing total liabilities by total assets. It reveals the percentage of the company's assets that are financed by creditors. The higher the ratio, the more risk a company has in trying to repay the debt with interest.

AACSB: Analytic AICPA BB: Industry AICPA FN: Decision Making Difficulty: Medium Learning Objective: A2

145. Explain the recording and posting processes.

Information from business transactions and events is recorded in the journal in the form of journal entries. The journal entries include the date, the account titles, and debit and credit amounts. Journal entries may also include a further description of the transaction. During the posting process the debit and credit amounts recorded in the journal are transferred to the individual accounts in the ledger.

AACSB: Communications AICPA BB: Industry AICPA FN: Decision Making Difficulty: Medium Learning Objective: P1

#### 146. What is a trial balance? What is its purpose?

The trial balance is a list of all of the accounts in the ledger with balances at a point in time. The list is organized by debit and credit balances. The purpose of the trial balance is to summarize the account totals and to verify the accuracy of the total debits and credits. If the total debits and credits are not equal, then the trial balance is out of balance which indicates an error in the accounting records. However, even if debits do equal credits this is no guarantee that no errors were made in recording and posting transactions.

147. Describe the link between the income statement, the statement of owner's equity, and the balance sheet.

The income statement shows the amount of net income the company has earned. That income is carried to the statement of owner's equity. The net income is added to the beginning owner's equity, and owner's withdrawals are subtracted to determine the ending owner's equity. The ending owner's equity is then carried to the balance sheet.

HAL'S AUTO REPAIR		
Trial Balance		
October 31		
	<u>Debit</u>	<u>Credit</u>
Cash	\$ 975	
Accounts receivable	3,800

Hal Frederick, Withdrawals	4,200	ŕ
Repair fees earned	•	10,875
Supplies expense	8,600	
Totals	<u>\$37,675</u>	\$38,385

Because the trial balance did not balance, you decided to examine the accounting records. You found that the following errors had been made:

- 1 A purchase of supplies on account for \$245 cash was posted as a debit to Supplies and as a debit to Accounts Payable.
- 2 An investment of \$500 cash by the owner was debited to Hal Frederick, Capital and credited to Cash.
- 3 In computing the balance of the Accounts Receivable account, a debit of \$600 was omitted from the computation.
- 4 One debit of \$300 to the Hal Frederick, Withdrawals account was posted as a credit.
- 5 Office equipment purchased for \$800 was posted to the Repair Equipment account.
- 6 One entire entry was not posted to the general ledger. The transaction involved the receipt of \$125 cash for repair services performed for cash.

Prepare a corrected trial balance for the Hal's Auto Repair as of October 31.
