

TEST BANK

- 1) Before developing a hypothesis, a researcher should
- draw some conclusions.
 - formulate a research question.
 - test the hypothesis.
 - conduct the experiment.

Answer: b

Diff: 3

Type: MC

Page Reference: 34

Skill: Recall

- 2) From a scientific perspective, in order to understand a sexual behaviour, we must first be able to
- observe it directly.
 - visualize it discreetly.
 - dissect it.
 - describe it.

Answer: d

Diff: 2

Type: MC

Page Reference: 35

Skill: Recall

- 3) An empirical approach to the study of human sexuality is based on
- research evidence.
 - a combination of intuition and concrete evidence.
 - intuition.
 - subjective evidence.

Answer: a

Diff: 1

Type: MC

Page Reference: 34

Skill: Applied

- 4) Which of the following would *not* be considered a psychological variable?
- a. anxiety about becoming sexually active
 - b. the stiffness of a man's erection after consuming alcohol
 - c. self-confidence in one's ability to sexually please a partner
 - d. the level of happiness a woman reports following orgasm

Answer: b

Diff: 2

Type: MC

Page Reference: 35

Skill: Applied

- 5) A representative sample consists of individuals who accurately represent
- a. diverse populations.
 - b. the different mainstream religions.
 - c. all age groups equally.
 - d. the population of interest.

Answer: d

Diff: 3

Type: MC

Page Reference: 35

Skill: Recall

- 6) Critical thinking and the scientific approach are similar in that they
- a. share the same theories.
 - b. make assumptions.
 - c. embrace skepticism.
 - d. share the same questions.

Answer: c

Diff: 2

Type: MC

Page Reference: 34

Skill: Recall

7) A hypothesis is

- a. a theory that is based on available information.
- b. a precise prediction about behaviour that is often derived from theory and is tested through research.
- c. a research question formulated through observation of daily occurrence.
- d. a research question tested through experimentation.

Answer: b

Diff: 2

Type: MC

Page Reference: 34

Skill: Recall

8) A hypothesis is a(n)

- a. established theory.
- b. prediction about behaviour.
- c. question.
- d. statement of fact.

Answer: b

Diff: 1

Type: MC

Page Reference: 34

Skill: Recall

9) The first step in the scientific method is

- a. establishing a hypothesis.
- b. testing a hypothesis.
- c. formulating a research question.
- d. designing a method.

Answer: c

Diff: 2

Type: MC

Page Reference: 34

Skill: Recall

10) A vaginal photoplethysmograph works by measuring

- a. the length of the vagina.
- b. how much the vagina expands.
- c. how much light is reflected from vaginal walls.
- d. how much the clitoris expands.

Answer: c

Diff: 2

Type: MC

Page Reference: 46

Skill: Recall

11) A method of *objectively* measuring sexual arousal in men is to

- a. ask men to rate their level of arousal.
- b. interview men about their level of arousal.
- c. measure genital engorgement with a penile strain gauge.
- d. determine the number of times men engage in sexual activity.

Answer: c

Diff: 3

Type: MC

Page Reference: 46

Skill: Applied

12) All of the following are examples of demographic variables *except*

- a. age.
- b. religious background.
- c. level of education.
- d. food preferences.

Answer: d

Diff: 1

Type: MC

Page Reference: 35

Skill: Applied

13) Which of the following is *not* one of the four goals of science?

- a. explain
- b. coerce
- c. describe
- d. predict

Answer: b

Diff: 1

Type: MC

Page Reference: 35

Skill: Applied

14) As a survey sample, the readers of *Glamour* magazine are likely to be

- a. less educated than the average person.
- b. biased.
- c. overly compliant.
- d. non-compliant.

Answer: b

Diff: 2

Type: MC

Page Reference: 36

Skill: Applied

15) A researcher can generalize the results of her survey to the population of interest if

- a. her response rate is over 70%.
- b. her sample represents the target population.
- c. she used randomized sampling.
- d. low levels of volunteer bias were evident.

Answer: b

Diff: 3

Type: MC

Page Reference: 35

Skill: Applied

- 18) When subgroups in a sample are represented in proportion to their membership in the population, the sample is called a(n)
- stratified random sample.
 - probability sample.
 - convenience sample.
 - adjusted random sample.

Answer: a

Diff: 2

Type: MC

Page Reference: 36

Skill: Applied

19) The Statistics Canada one- and two-year cycle Canadian Community Health Survey is of interest to sexuality researchers because it collects

- a. data similar to that collected by Kinsey.
- b. recurring data on rates of common male and female sexual dysfunctions.
- c. recurring data on age of first intercourse and condom use at last intercourse.
- d. the only data available on the safer sex practices of gay and lesbian Canadians.

Answer: c

Diff: 3

Type: MC

Page Reference: 40

Skill: Applied

20) To study frequency of intercourse after age 65, the publishers of *65 Plus* magazine include a survey in their January issue. Twenty-five percent of the subscribers return the survey. What should the publishers tell their readers about this survey?

- a. The results can be generalized to the complete readership of *65 Plus*.
- b. The results cannot be generalized to the adult population over 65.
- c. The response rate was high enough to represent the adult population over age 65.
- d. The sample can be adjusted so that it represents a random sample of adults over age 65.

Answer: b

Diff: 2

Type: MC

Page Reference: 36

Skill: Applied

21) In many surveys of sexual behaviour, it is likely that respondents have been reluctant to disclose same-sex behaviour because they perceive a stigma attached to gay and lesbian sexuality. This is an example of

- a. poor locus of control.
- b. social desirability bias.

- c. researchers not adequately stressing the importance of being honest.
- d. a lack of randomization.

Answer: b

Diff: 2

Type: MC

Page Reference: 42

Skill: Applied

22) A scale with good validity

- a. measures what it purports to measure.
- b. demonstrates incidence.
- c. is consistent and precise.
- d. results in a representative sample.

Answer: a

Type: MC

Page Reference: 39

Skill: Recall

23) In comparison to non-volunteers, volunteers for sex surveys tend to be

- a. more sexually restrictive and conservative-minded.
- b. more sexually permissive and liberal-minded.
- c. more likely to have sexual problems.
- d. less likely to have sexual problems.

Answer: b

Diff: 1

Type: MC

Page Reference: 41

Skill: Recall

24) Why do researchers usually not choose to measure populations?

- a. The data are not as reliable as data from samples.
- b. Populations are not representative of selected samples.

- c. Data from populations can be skewed by deviant subjects.
- d. It is virtually impossible to measure populations.

Answer: d

Diff: 3

Type: MC

Page Reference: 36

Skill: Applied

25) In human sexuality research, a population is a

- a. representative sample.
- b. target group.
- c. percentage of a larger group.
- d. complete group of people.

Answer: d

Diff: 1

Type: MC

Page Reference: 35

Skill: Applied

26) A researcher sets up a web blog and asks women to describe the positive and/or negative experiences they have had with sexually explicit material. This is an example of what kind of research?

- a. interview
- b. naturalistic observation
- c. quantitative
- d. qualitative

Answer: d

Diff: 2

Type: MC

Page Reference: 49

Skill: Applied

27) An advantage to using interviews instead of questionnaires is that interviews

- a. are more objective.

- b. take less time to administer.
- c. give researchers the opportunity to probe.
- d. are less expensive.

Answer: c

Diff: 2

Type: MC

Page Reference: 37

Skill: Recall

- 28) Disadvantages of the case-study method include
- a. lack of thorough descriptions of the demographic variables.
 - b. uncertainty about the subject's background.
 - c. too little contact time between client and clinician.
 - d. the lack of rigour compared to an experiment.

Answer: d

Diff: 3

Type: MC

Page Reference: 37

Skill: Applied

- 29) Researchers using the case study method must be especially aware of
- a. observer bias.
 - b. sample adjustment.
 - c. participant bias.
 - d. sample stratification.

Answer: a

Diff: 2

Type: MC

Page Reference: 37

Skill: Applied

- 30) In sex research, case studies have been especially helpful in
- a. developing new varieties of sexual techniques.

- b. identifying the social barriers encountered by homosexuals.
- c. treating sexual dysfunctions.
- d. recording ethnic differences in sexual responsiveness.

Answer: c

Diff: 2

Type: MC

Page Reference: 37

Skill: Applied

31) As a research project, a group of researchers studied the interactions of three homosexual teens in a predominantly heterosexual high school by going to classes with the students for the first six months of their junior year. Which method is the research team using?

- a. experimental
- b. interview
- c. survey
- d. case study

Answer: d

Diff: 1

Type: MC

Page Reference: 37

Skill: Applied

32) In reliability studies done eighteen months after his original surveys, Kinsey found

- a. significant changes in the sexual behaviour of his subjects.
- b. consistency in the frequency of sexual behaviour reported by his subjects.
- c. consistency in the incidence of sexual behaviour reported by his subjects.
- d. inconsistencies in the incidence of sexual behaviour reported by subjects.

Answer: c

Diff: 2

Type: MC

Page Reference: 39

Skill: Recall

- 33) Most national studies of sexual behaviour in Canada have
- a. used a focus group methodology.
 - b. not examined contraceptive use.
 - c. adequately sampled sexual minorities.
 - d. been limited in scope.

Answer: d

Diff: 1

Type: MC

Page Reference: 40

Skill: Recall

- 34) Kinsey and his colleagues were interested in studying
- a. the causes of sexual behaviours.
 - b. the incidence of sexual behaviours.
 - c. the treatment of sexual dysfunctions.
 - d. the sexual response cycle.

Answer: b

Diff: 1

Type: MC

Page Reference: 39

Skill: Applied

- 35) Statisticians have concluded that Kinsey's researched contained
- a. systematic biases.
 - b. observer biases.
 - c. an over-sampling of poor people.
 - d. a true probability sample.

Answer: a

Diff: 2

Type: MC

Page Reference: 38

Skill: Applied

36) Reliability refers to

- a. how trustworthy subjects' responses can be considered.
- b. how accurately different interviewers record subjects' responses.
- c. how accurately the questions measure what they're intended to measure.
- d. how consistently a question elicits the same answer on different occasions.

Answer: d

Diff: 3

Type: MC

Page Reference: 39

Skill: Recall

37) Which of the following groups were under-represented in Kinsey's studies?

- a. gays, lesbians, and urban populations
- b. the elderly, the upper class, and ethnic populations
- c. the upper class, ethnic minorities, and homosexuals
- d. ethnic minorities and rural populations

Answer: d

Diff: 2

Type: MC

97) Describe and discuss random sampling and stratified random sampling in research.

Answer:

- Random sampling allows every member of the target population an equal chance to participate.

- A stratified random sample is one in which known subgroups in a population are represented in proportion to their numbers in the population.

98) Discuss the strengths and weaknesses of each of the research methods used in sex research.

Answer:

- Case study: in-depth biography of an individual or a small group. Strength: in-depth; lots of information; usually results from innovative treatments. Weakness: not rigorous; participants' gaps in memory; observer bias; guidance by interviewers; small sample.
- Survey method: interviews and questionnaires. Strength: large sample, opportunity for probing. Weakness: only used by people that can read and write (questionnaires), interviews require man-power; represent people that are willing to respond.
- Naturalistic observation: direct observation of behavior. Strength: observe real-life as it happens. Weakness: the subjects know they are being watched; might not perform behaviours as usual.
- Ethnographic observation: behaviours and customs of ethnic groups. Strength: observation of real-life as it happens. Weakness: performance of behaviour away from others makes it hard to observe; observers might not be allowed into the group to observe; ethnic rules and guidelines might limit.
- Participant observation: direct interaction with population. Strength: firsthand knowledge. Weakness: influenced by personal experience prior to exposure, as well as during (might not represent population).
- Focus group: group of people to determine attitudes and behaviours. Strength: general questions that spark discussion and free-flow of ideas. Weakness: limited in size; people might be afraid to speak freely in the group; important areas might be missed.
- Laboratory observation: observe natural behaviours in the lab setting. Strength: control of environment and ability to gather data properly and easily. Weakness: might not represent the natural behaviour; might not represent personal ideals (but rather social ones).

99) If you wanted to study an aspect of sexuality among your college classmates, what would you need to do to ensure that your results could be generalized?

Answer:

- that the sample was random
- that the sample included the population being studied

- that those involved gave informed consent
- that those involved were willing to be open and share, regardless of their social situation/culture

100) Discuss the strengths and weaknesses of Kinsey's research.

Answer:

- Strength: reliability was checked; encouraged candour; ensured that interviewers were not passing judgment

- Weakness: the sample did not represent the general population; validity was not checked; systematic biases
