111. Explain the conclusion of the Hawthorne studies.

Answer: Elton Mayo and his colleagues conducted the Hawthorne studies and concluded that the new “social setting” created for workers in the test room made them want to do a good job. They shared pleasant social relations with one another and received lots of special attention that made them feel important. They were given a lot of information and were frequently asked for their opinions. Mayo’s team concluded that good “human relations” in the test room seemed to result in higher productivity.

112. Explain the two underlying principles that form the basis for Maslow’s theory of human needs.

Answer: Abraham Maslow described a need as a physiological or psychological deficiency a person feels the compulsion to satisfy, suggesting that needs create tensions that can influence a person’s work attitudes and behaviors. Maslow’s theory is based on two underlying principles. The first is the deficit principle—a satisfied need is not a motivator of behavior. People act to satisfy “deprived” needs, those for which a satisfaction “deficit” exists. The second is the progression principle—the five needs exist in a hierarchy of “prepotency.” A need at any level is activated only when the next-lower-level need is satisfied.

113. What are the two different assumptions that create a self-fulfilling prophecy?

Answer: Theory X and Theory Y are the two assumptions that create self-fulfilling prophecies. Managers with Theory X assumptions, for example, act in a very directive “command-and-control” fashion that gives people little personal say over their work. These supervisory behaviors create passive, dependent, and reluctant subordinates, who tend to do only what they are told to or required to do. This reinforces the original Theory X viewpoint. In contrast to Theory X, managers with Theory Y assumptions tend to behave in “participative” ways that allow subordinates more job involvement, freedom, and responsibility. This creates opportunities to satisfy esteem and self-actualization needs; workers tend to perform as expected with initiative and high performance.

114. Discuss organizations as systems.

Answer: Organizations have long been described as cooperative systems that achieve great things by combining resources and the contributions of many individuals to achieve a common purpose. But the reality is that cooperation among the many people and parts is often imperfect and can be improved. That is why it's important to understand the full complexity of an organization as a system of interrelated parts or subsystems that work together to achieve a common purpose. It is helpful to view organizations as open systems that interact with their environment in a continual process of transforming inputs—people, technology, information, money, and supplies—into outputs—goods and services for their customers and clients.
