3. In order, list the steps involved in the development of a successful marketing plan.

ANS:

1. Define the organization's mission.
2. Establish organization objectives.
3. Assess organizational resources and evaluate environmental risks and opportunities.
4. Formulate and implement a marketing strategy.
5. Monitor performance and modify strategy as needed.

4. Distinguish between an organization's mission and its objectives. Provide an example of each.

ANS:

Strategic Planning in Contemporary Marketing

An organization's mission is its essential purpose that differentiates it from other organizations. An example of a mission statement is: "To be regarded as the quality and market leader of the hotel industry worldwide."

Objectives are organizational goals and guide development of supporting marketing objectives and plans. Well-conceived objectives should state relatively specific intentions. An example of an objective is: "attain a 20 percent share of the market by 2010."

5. Define marketing strategy. What are its elements? When is a marketing strategy implemented?

ANS:

The marketing strategy is an overall, company-wide program for selecting a particular target market, and then satisfying consumers in that market through a careful blending of the elements of the marketing mix—product, distribution, promotion, and price—each of which is a subset of the overall marketing strategy. In the two final steps of the planning process, marketers put the marketing strategy into action; then they monitor performance to ensure that objectives are being achieved. Sometimes strategies need to be modified if the product's or company's actual performance is not in line with expected results. Until recently, U.S. consumers were forced to choose a cell phone service provider before selecting the phone, which came from a list of models approved by the provider. Often this restriction resulted in frustration because consumers could not always get the features they wanted and needed. But Verizon has broken rank by announcing that it will let its customers choose any cell phone, device, or software that is compatible with its network. If other providers follow Verizon's lead, consumers may soon enjoy a more open cell phone market. Occasionally, a strategy meets with controversy or criticism, as in the case of companies that decided to ration rice purchases during a recent shortage.

6. List Porter's Five Forces. How does the model fit together, and how has the Internet affected this model?

ANS:

Michael E. Porter identified five competitive forces that influence planning strategies in a model called Porter's Five Forces. They are potential new entrants, the bargaining power of buyers, the bargaining power of suppliers, threat of substitute products, and rivalry among competitors. The first four forces influence the fifth force.

Strategic Planning in Contemporary Marketing

Potential new entrants are sometimes blocked by the cost or difficulty of entering a market. The Internet has reduced the barriers to market entry in many industries. If customers have considerable bargaining power, they can greatly influence a firm's strategy. The Internet can increase a customer's buying power by providing information that might not otherwise be easily accessible. The number of suppliers available to a manufacturer or retailer affects their bargaining power. If customers have the opportunity to replace a company's products with goods or services from a competing firm or industry, the company's marketers may have to find a new market, change prices, or compete in other ways to maintain an advantage. The four previous forces influence the rivalry among competitors. In addition, issues such as cost and differentiation or lack of differentiation of products—along with the Internet—influence the strategies that companies use to stand out from their competitors. With increased availability of information, which tends to level the playing field, rivalry heats up among competitors, who try to differentiate themselves from the crowd.

The Internet has increased the speed and availability of information that the customers, suppliers, and competitors can use to make decisions. This leads to leveling of the competitive playing field which, in turn, increases the marketing challenge to stand out from the pack of competitors.

7. Explain the difference between a first-mover and second-mover strategy. Give examples of companies that have followed each strategy.

ANS:

The first-mover strategy is based on the notion that the company who is first to offer a product in the marketplace will capture the greatest market share and be the long-term winner. Being the first can also refer to entering new markets with existing products or creating significant innovations that effectively turn an old product into a new one. An example of a successful first mover is eBay. The second-mover strategy, on the other hand, is based on the notion that the best way to gain advantage in the marketplace is to closely observe the innovations of first movers and then improve on them. Microsoft is famous for adopting a second-mover strategy.

8. Define SWOT analysis. Why would an organization undertake a SWOT analysis of itself?

ANS:

SWOT analysis is an important strategic planning tool that assists planners in their planning task.

- a) SWOT stands for strengths, weaknesses, opportunities, and threats. The analysis provides managers with a critical view of an organization's internal and external environment and helps them evaluate the firm's fulfillment of its basic mission.
- b) The analysis allows planners to match the firm's internal strengths with external opportunities to secure organizational leverage in the marketplace.
- c) It further assists the firm in recognizing internal weaknesses that might prevent capitalizing on opportunities, which would constrain its activities.
- d) SWOT analysis aids in the identification of environmental threats to the firm's strengths that could lead to vulnerabilities.
- e) Finally, SWOT analysis helps spot internal weaknesses that environmental threats might

attack, which would present the firm with problems.

9. Describe how a not-for-profit organization might utilize SWOT analysis.

ANS:

The United States Postal Service is a good example of a not-for-profit organization that can benefit from SWOT analysis. In the past three decades, it has been trying to operate as a for-profit business in order to remain efficient and competitive. SWOT analysis was conducted to determine its weaknesses, for one thing, in the marketing mix. Distribution (partnering with FedEx and other carriers to expedite express mail), product/service (extending hours, offering supplies for sale in the lobby), pricing (the no-expiration stamp), and public relations efforts (to change the perception of the USPS in the minds of the consumer) are examples of how it is accomplishing its goals. The increase in e-commerce is eroding profits, and USPS will have to quickly adjust to market changes in the future.

10. What is a strategic window? Give an example of a strategic window that exists today.

ANS:

A strategic window is a limited period during which the key requirements of a market and the particular competencies of a firm best fit together.

The growth of China has increased the number of strategic windows as their demand for products increases. The auto industry, in particular, is facing a strategic window as the demand for automobiles rises in the Chinese market.

11. Discuss the concept of target market. What roles do diversity and demographics play in a target market?

ANS:

The target market is the group of people toward whom a firm decides to direct its marketing efforts. Diversity plays an ever-increasing role in targeting markets. For example, according to the U.S. Census Bureau, the rapidly growing Hispanic population in the United States surpassed African Americans as the largest minority group. With this substantial growth, marketers should pay attention to these and other markets — including women, seniors, and children of baby boomers — as they develop goods and services to offer consumers.

12. What is a marketing mix? In order for a product to succeed, what can be said about the variables in the product mix?

ANS:

The marketing mix variables - product, distribution, promotion, and price - are combined to satisfy the needs of the target market. Product is a broad concept encompassing goods, services and ideas, but also including the satisfaction of all consumer needs with respect to the relevant good, service or idea. Distribution refers to getting products to consumers in the right quantities, at the right place, and at the right times. Promotion is the communications link between buyers and sellers. Pricing deals with the means of setting justifiable and profitable prices.

Successful products have a marketing mix where all variables are on target. Great pricing, product, and promotion mean nothing if the customer cannot find the product. Lack of promotion could leave a great product gathering dust on retail shelves.

13. What does a distribution strategy involve? Define two marketing channels.

ANS:

Marketers develop distribution strategies to ensure that consumers find their products in the proper quantities at the right times and places. Distribution decisions involve modes of transportation, warehousing, inventory control, order processing, and selection of marketing channels. Marketing channels are intermediaries that may be involved in a product's movement from producer to final consumer. Two types of marketing channels are wholesalers and retailers.

14. How do elements of a marketing environment affect marketing decision-making?

ANS:

- a) Marketers do not make decisions about target markets and marketing mix variables in vacuum. They must take into account the dynamic nature of the five dimensions of the marketing environment - competitive, political-legal, economic, technological, and social-cultural factors.
- b) The competitive environment includes anyone or anything with which the firm competes for a potential customer's discretionary purchases.
- c) The political-legal environment, laws, regulations, and the power balance within the firm must be maneuvered successfully to protect the well being of the firm and the society.
- d) The economic environment deals with the health and success of the relationship between supply and demand in a given economy, and of its components.
- e) The technological environment refers to the use of science and engineering in a society. The ability of a culture to adapt to new technology is crucial to its development.
- f) Finally, the social-cultural environment includes a variety of factors, including prevailing cultural norms and affects a firm's "survivability." How well people interact is a strong measure of cultural survivability.

15. Describe the strategic business unit concept.

16. Describe the market share/market growth matrix.

ANS:

The market share/market growth matrix places business units in a four-quadrant chart that plots market share - the percentage of the market the firm controls - against market growth potential. Stars are units with high market shares and high growth potential. The firm should invest more funds for future growth. Cash cows are units with high market shares but low growth potential. They generate strong cash flows that should be used to finance the growth of stars. Question marks are units with low market shares but high growth potential. The firm needs to watch these units carefully, making prudent investment decisions. These units typically use more cash than they generate. Dogs are units with low market shares and low growth potential. These units are least attractive and the firm should consider withdrawal.
